The Industrial SOUTH

That the South is the fastest growing region industrially in the nation is borne out by U. S. Department of Commerce figures, compiled from preliminary Bureau of Census reports for number of manufacturing plants.

	1947	1958
South	53,332	71,044

Rest of		
U. S.	187,549	227,033

Gains	Plants	%
South	17,712	33.2

Rest of		
U. S.	39,484	21.1

These figures are the basic reason for the great increases in advertising budgets to sell the products of the South to the nation.

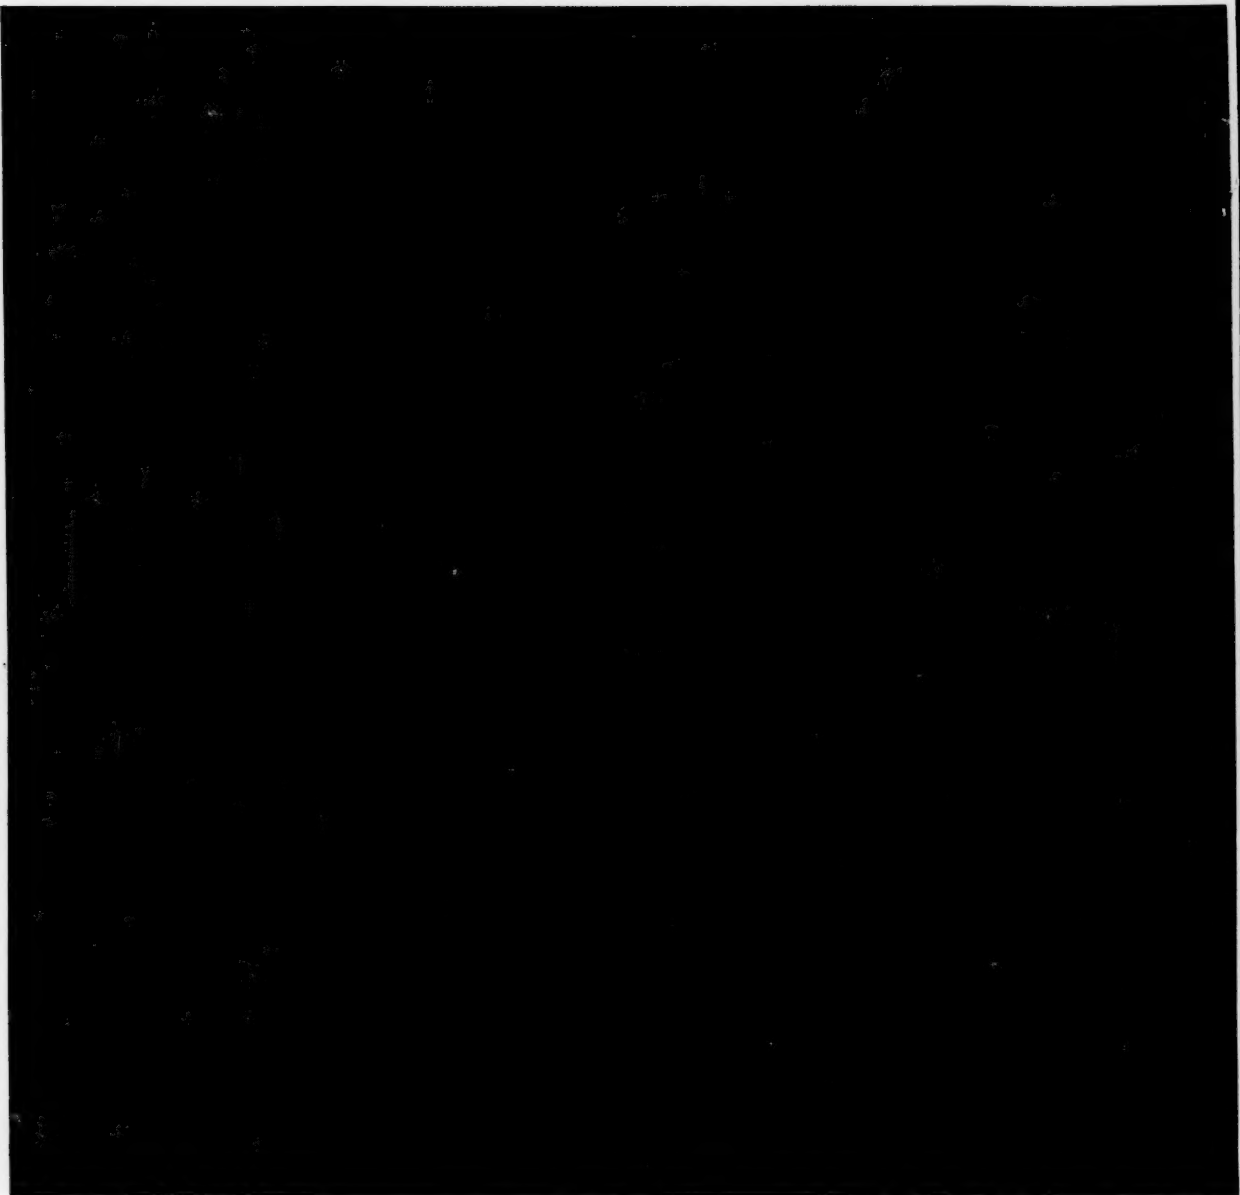

Keep your story before the Southern Agencies and Southern manufacturers who are producing this advertising.

Chalk up another big year

Better than one every working day—that's the "score" for industrial developments along our lines in 1959. And what a range of activities they cover! Pulp and paper . . . chemicals . . . textiles . . . lumber, woodworking and building materials . . . metals and metalworking, to list but a few. You name it—the modern South has it.

Chances are, this fast-growing territory served by the Southern has what is good for you, too. Plentiful, willing-to-work manpower! Expanding markets for goods of all kinds! Raw materials and rich natural resources close at hand! Ample and economical electric power! Efficient, low-cost rail transportation!

All America is growing—but the fast-growing youngster of the "family" is the modern South!

for industrial developments along the Southern!

Right now plant site specialists in our Industrial Development Department are busier than ever consulting with companies, large and small, that are considering the modern South for greater opportunities and more profitable growth. But they aren't too busy to talk with you. They know many of the things you would like to talk about and,

equally important, they know the importance of not talking about your plans with anyone but you.

Let us hear from you so that we can help you.
"Look Ahead—Look South!"

Harry A. Roberts
 PRESIDENT

The Southern Serves the South

SOUTHERN RAILWAY SYSTEM

WASHINGTON, D. C.

THE SOUTH'S COMPETITIVE

The record shows that in 1959 the South racked up another significant year of economic growth—a record of expansion which attests to the fact that the region has all the major essentials to compete successfully with the rest of the nation.

During 1959 the South continued to forge ahead on virtually all economic fronts, a fact graphically attested to in the statistical data carried on other pages in this 1960 Blue Book.

How, and why, has the South managed to make all this progress? Of course a variety of factors are involved, factors which add up to a clear-cut picture that the region is in an excellent competitive position as compared to the rest of the nation.

Item one, for example, is the fact that the South's volume of retail trade has been expanding faster than the national average. In 1959 the region's trade accounted for well over a fourth of all retail trade, while it accounted for only 16.1 per cent of the total in 1947.

Similarly, the region is enjoying a very rapid increase in foreign trade, the South's ports accounting for approximately one third of the nation's export-import business.

Second, the South, with its high birth rate and rapid mechanization of farms, presents a great reservoir of manpower which is rapidly gaining in skills and earning capacity. The 1959 Blue Book estimate on the South's population was 54.720 million, while the estimate for the nation was 179.3 million.

Also ranking high, certainly, is the region's huge capacity to supply basic raw materials. In addition to such minerals as petroleum, natural

gas, magnesium, bauxite, phosphate rock, kaolin, marble, sulphur and many others, the South has 193 million acres of forest land, more than any other region, providing the basis for an ever-expanding number of enterprises directly and indirectly related to forests. In 1959, for instance, this region accounted for more than a fourth of the total dollar value output of the pulp and paper industry.

Transportation facilities in the region offer another important competitive advantage. New highway construction is proceeding at a record rate here, the region has 60 per cent of the nation's navigable waterways, and the era of jet travel has put the South only a few hours away from the farthest point in the country.

The region has the money now, too, to help finance its own growth. Last year just the region's national banks alone had assets of approximately \$28.86 billion which was nearly 23 per cent of the national total.

Essential water constitutes another of the South's great industrial assets. Rainfall here is about 10 per cent above the national average, yet the region actually uses only about 4 per cent of its available water.

Couple all these things with such factors as the burgeoning power and fuel output of the region, the good business climate which exists here, and the vast acreages of suitable land available for plant sites, and

you can see why the direction of the South's economy is strongly upward.

Following is a compilation of comments, made in response to a special Blue Book survey, of what a cross-section of Southern business, industrial and educational leaders have to say about the region's accomplishments and its outlook:

J. D. WISE, PRESIDENT, SOUTHERN ASSOCIATION OF SCIENCE AND INDUSTRY, HAZELHURST, MISS.: "I am impressed with the growing interest of the South in science and research. This is all to the good, both for building our present economy and for participating in the future growth of the country. There are certain trends under way to which we need to be alert, namely, that this is an age of science and research and of trained manpower. Our future depends upon how successfully we meet the challenge of these trends. In the South we, of course, look to our universities for further development of basic or pure research. And in this connection it seems to me that the South has a special advantage in being one of the few remaining regions which offers "uncrowded" environment for individual research so important to advances in basic science. This is an area where individualism needed for good basic research can be nurtured."

GARLAND PEYTON, DIRECTOR, DEPT. OF MINES, MINING AND GEOLOGY, STATE OF GEORGIA: "Georgia from a mineral point of view, is mainly a supplier of non-metallic raw materials. We have had still further expansion in the production of high-grade white clay which gives every indication of expanding much more during the next few years. Additional uses are being developed annually for this type of material and exact specifications call for the production of ever improved quality. The expanded demand for crushed stone for aggregate has brought about the launching of one or more new, large scale crushing plants during the past year. The production of sand for building purposes

POSITION

and high-grade sand for glass making has shown further growth during the past year and offers promise of continued growth during the years immediately ahead."

JAMES D. EPPRIGHT, DIRECTOR INDUSTRIAL DEVELOPMENT, TEXAS POWER & LIGHT COMPANY, DALLAS: "Progress toward industrial and economic development in the 52-county area we serve has been considerable during the past 15 months. Much of this has been due to an awakening on the part of local community leaders to the great benefit of industry. This awakening has resulted in the organization of effective teams to deal with industrial prospects and the organization of local foundations to assist in financing industrial facilities. Our company maintains a sizeable staff in the general office which has contributed measurably, along with our field management personnel, in bringing this condition about. The success of these efforts is evidenced by 1959 results in our area when 45 substantial industries chose locations. This year, 1960, is starting off at a rapid pace which indicates an even bigger year in economic development."

CREED GILLEY, DIRECTOR, INDUSTRIAL PROMOTION, DUKE POWER COMPANY, CHARLOTTE, N. C.: "Duke Power Co. more than doubled its generating capacity in the decade just ended to meet the demand created by residential and industrial growth of the Piedmont Carolinas. In 1949, the Company's generating capacity was 1,298,000 kilowatts. With the addition of a 275,000-kilowatt unit at Allen Plant in 1959, the present capacity is 3,058,000 kilowatts. Fourteen units ranging in size from 70,000 to 275,000 kilowatts were added during the ten-year period. This represented \$197 million of the \$463 million Duke Power spent for additional facilities to service the 703,000 customers it has today. At the end of 1949, Duke had 450,000 customers. Projected for operation about 1965 is the first unit of what is expected ultimately to be the largest plant on the Duke system, a 2,000,000 kilowatt steam-electric generation station to be constructed at a site on the Savannah River. Additional units will be constructed as required."

ALBERT G. SANDERS, JR., EXECUTIVE DIRECTOR, NORTH MISSISSIPPI INDUSTRIAL DEVELOPMENT ASSOCIATION, WEST POINT, MISSISSIPPI: "In the next few years we expect to see further developments in this area in classifications of industry which use a higher proportion of semi-skilled and skilled employees and higher percentages of men employees in the total numbers employed. We will have some further developments in apparel, shoes and upholstering furniture, which have been growing rapidly over the last ten years, but we expect to see more plants engaged in metal fabricating and assembling, covering such things as manufacture of household appliances and many other items. This region should continue to grow at a rate at least equal to, and very probably exceeding that of the past ten years, assuming we do not have a major depression."

ROY C. MARCATO, DIRECTOR, BUREAU OF PUBLICITY AND INFORMATION, STATE OF ALABAMA, MONTGOMERY: "Industry looking for new locations or expansion in New localities are seriously considering the recreational aspects of the regions. Alabama is unique in that these recreational advantages are already in existence. During 1959 the travel industry in Alabama rose to third place. The rapid development of this important industry has opened new expansions in other related industries in the State and will provide the means for the leaders of industry to recruit new personnel for their expansion. I am highly confident that with further development, the tourist industry will reach second place in industries in Alabama, and that soon Alabama will become a leader in the south in recreation for all the peoples of this country."

JOSEPH S. HORAN, CARTER-HORAN PLANNING CONSULTANTS, BATON ROUGE, LA.: "Southern business in general will fair better in 1960 than in 1959, but less so than optimistic forecasts of last December. Indicators are that 'The Soaring 60's', as this decade is being labeled, will live up to its name, with the most phenomenal growth taking place in the latter half of the period."

STANLEY A. ARBINGAST, ASSISTANT DIRECTOR, BUREAU OF BUSI-

NESS RESEARCH, THE UNIVERSITY OF TEXAS, AUSTIN: "Texas can be expected to remain as one of the most dynamic of the nation's industrial frontiers for the foreseeable future. The key factor to industrial expansion and concomitant growth is the wide diversity of resources present. Technological skills are available to develop and manage them. The outlook for 1960 in the state of Texas is highly promising. Several new and large industries have announced plans for Texas within the past two months. Texas leads the nation in amount of money scheduled to be spent on new and expanded chemical plants during 1960 and 1961."

LOUIS V. SUTTON, PRESIDENT AND CHAIRMAN, CAROLINA POWER & LIGHT COMPANY, RALEIGH, N. C.: "Both Carolina Power & Light Company's energy sales and electric revenues last year totaled four times what they were in 1946; and during the same post-war period, net income rose 241 per cent and gross electric plant increased 277 per cent. These gains—substantially higher than the industry as a whole—reflect an investor-owned electric utility keeping pace with the economic growth of the region it serves. CP&L serves approximately 30,000 square miles, or half the land area of North Carolina and a fourth that of South Carolina. Our company has been a witness to—and participant in—a shifting emphasis from agriculture to industrial development. Since World War II, industry has made capital investments totaling \$585,000,000 in new and expanded facilities within the area served by CP&L, creating more than 83,000 new jobs with an estimated additional payroll of \$211,000,000 a year."

LEROY C. STEWART, SALES MANAGER, DOW CHEMICAL COMPANY, ATLANTA, GA.: "There were increases in manufacture and use of chemicals, plastics, and light metals in the South during 1959 as compared with previous years. Still greater production of these materials appears to be certain in 1960. In the field of agricultural chemicals, recently improved formulations of herbicides have increased the efficiency of their use in farming, and have afforded still greater reductions in cost in right-of-way maintenance by power and com-

SOUTH'S GAINS

munication companies. Among the industrial chemicals the broad group manufactured under the classification, petrochemicals, has expanded in number and complexity of individual compounds."

ROBERT B. BENNETT, PROFESSOR OF CHEMICAL ENGINEERING, UNIVERSITY OF FLORIDA, GAINESVILLE: "In the field of plastics, as in many other fields, the South has shown surprising growth. The statistics, readily available can be just cold numbers to the average reader. Other facts can be more impressive such as the realization by the Southerners that small and medium-sized plants are moving into their locality every month. In helping to organize the Florida Section of the Society of Plastics Engineers, Inc., in Miami, even the writer was surprised to find that over a hundred persons were eligible to participate in this locality. The enthusiastic participation for the past two years has demonstrated the overall healthy prosperity and forecasts attraction for similar groups. The writer believes so strongly in the great potentials for our South with respect to South America that he plans to spend the next two years in Brazil in order to help build solidarity in thinking and trade in this hemisphere."

RICHARD L. WOODWARD, PRESIDENT, TIDEWATER VIRGINIA DEVELOPMENT COUNCIL, NORFOLK, VA.: "The rapid growth which has taken place in the South during the last 10 years is only an indication of the tremendous industrial expansion which reasonably can be anticipated during the next 10 years. The tendency on the part of manufacturers to seek decentralized rural and suburban locations will be intensified in the future. The south, with large acreages and labor forces available, stands to capitalize on this more so than any other section of the nation. We are thoroughly confident that the future years shall see a complete transformation of the industrial complexes now in the northeast and midwest in favor of southern locations."

CURT SIEGELIN, EXECUTIVE DIRECTOR, LOUISIANA DEPT. OF COMMERCE AND INDUSTRY, BATON ROUGE: "The South in general, and Louisiana in particular, is experiencing an unprecedented boom in new and expanding plant construction. Since the end of World War II, almost \$2.5 billion has been invested in new and expanding manufacturing facilities in Louisiana. By far, the largest majority of this growth has been along the banks of Louisiana's more than 5000 miles of navigable waterways. The rush of new industry to the Mississippi River, south of Baton Rouge and along the Calcasieu Ship Channel in southwest Louisiana, near Lake Charles, can be classified in two major categories, petrochemicals and primary metals. There can be no doubt that industrial expansion in Louisiana will continue at an even more accelerated rate in the "Soaring 60's."

E. WILLARD BERNY, CHAIRMAN, DEPT. OF GEOLOGY, DUKE UNIVERSITY, DURHAM, N. C.: "In the field of mining and geology, 1959 in the south was a fairly good year except in those minerals and alloys which play a part in the steel industry. The long steel strike was disastrous to them. In the oil and gas, production increased, although profits did not increase fast due to the increased cost. Several minerals whose production had been curtailed started in production again and should increase as time goes on. My feeling is that mining of various types will expand in the next few years. In fact with our increased population and the nearness to

SOUTH'S GAINS

market of some of our various economic deposits, and the introduction of natural gas as a fuel, there is no reason why a lot of things which are in the fringe area should not move into standard production. In the long run the minerals in the south should prosper as time goes on."

SHIELDS JOHNSON, VICE PRESIDENT, TIMES-WORLD CORPORATION, ROANOKE, VA.: "The South continued its forward march in the communications field last year. One evidence was the greater tonnage of newsprint used in 1959—being 7.2% more than 1958. This compared with a 6.3% gain in the Northeast; 6.5% North Central, and 10.8% in the West, according to the American Newspaper Publishers Association. It is safe to assume that the uptrend will continue, after temporary setbacks caused by the harsh storms of the later winter."

BEN HILBUN, PRESIDENT, MISSISSIPPI STATE UNIVERSITY, STATE COLLEGE, MISSISSIPPI: "The influence that higher education is having upon the South is undeniable. Fields and forests and factories are responding to its touch. The creation of wealth is a symbol of its influence. Students are taxing the capacities of our colleges and universities. The resulting problems are challenging opportunities which if not met will slow down the speed of progress. These universities and colleges justly demand more in support and facilities. At the same time they must be willing to give more. Research with purpose and teaching with objectivity will go far in assuring our future."

ARNATH W. KNABE, MANAGER, INDUSTRIAL DEVELOPMENT, BALTIMORE AND OHIO RAILROAD COMPANY, BALTIMORE: "That industry has become aware of the opportunity existing in our Southern States is best proved by the realization the region has gained practically two-thirds of its manufacturing enterprise since just before and following World War II. Analysis shows there are very real causes for this phenomenal growth, not the least of which has been the promotional efforts expended by the very able leadership within the States and the realization of the Southern citizen he has something to sell. I think the railroads also have had at least some small part in the overall picture. With its abundance of mineral and agricultural resources, and a wealth of excellent labor, there is little doubt the South will continue its meteoric climb to industrial preeminence. It can and should look forward to a large share of the billions expended annually for new and enlarged plant capacity. TO the railroad transportation industry this indeed is an encouraging note. The general welfare of the Country or a specific segment of the Country obviously has direct influence on tonnages available to the railroads. The Baltimore and Ohio serves that portion of the South comprised of Maryland, District of Columbia, Virginia and West Virginia, and we are well aware of the industrial activity within this territory; we are looking forward to even more industrial development in the future."

RAY E. BISHA, DIRECTOR INDUSTRIAL DEVELOPMENT, LOUISVILLE AND NASHVILLE RAILROAD, LOUISVILLE, KY.: "For many years the emphasis of the development departments of railroads in the South was upon agriculture. This is still important, of course, but since World War II the emphasis has definitely been placed upon industrial development. These railroads in the past decade or so have been prime movers in promoting industry's move to Dixie and have encouraged and fostered

*Too small to tabulate.

NATIONALLY KNOWN FIGURES FORESEE SUSTAINED GROWTH

These men, each of Southern origin and now in positions of importance on the national scene, offer here their considered opinions that the long-range uptrend in Southern development is but a hint of the great expansions to come.

Mark W. Clark

Conrad N. Hilton

Louis E. Wolfson

Andy Griffith

George V. Allen

L. L. Colbert

Mark W. Clark, President, The Citadel, General, U.S. Army, Retired: "The South is entering the threshold of a great industrial metamorphosis. This change is affecting all areas of life in the South, and I have observed particularly its effect on education. There is a tremendous flow of new capital into industry in the South, both from indigenous investors and from areas outside the southland. This seems to be due to a fresh awakening to the industrial value of the South's ideal climate, and to the potential of a vast labor market whose increasing technical ability can be quickly oriented to accommodate virtually any requirement.

"This has served to provide local opportunity for our college graduates who formerly were all too often forced to seek positions outside the South. Today, graduating seniors at The Citadel, for example, generally have a wide choice of job opportunities right here in the South. This is especially true of those graduating in such fields as engineering and chemistry. All this redounds to the credit of the South. It is not because there is a 'New South,' as phrase-makers describe the current situation, but because more and more responsible people are beginning to realize the great potential that has always been present here in the colorful 'Old South.'"

Conrad N. Hilton, President, Hilton Hotels Corporation, Beverly Hills, Calif.: "For the first time in its history, the Hilton Hotels Corporation is expanding into the South. This might be taken as another evidence of the considerable progress of the Southern states. No large organization is inclined voluntarily to expand anywhere but in growing communities. Our first hotels back in the Twenties were in the Southwest — in Texas. We moved westward to California, then due east to New York and, gradually, back across the country again. Our first hotel in the South will be in Atlanta — the 300 room Hilton Inn at the Municipal Airport. A similar Inn at the New Orleans International Airport was opened successfully in July, 1959. We are studying other communities in the South for the future. We have great faith in the continuing progress of the Southern states."

Louis E. Wolfson, Chairman, Merritt-Chapman & Scott Corporation, New York: "The industrial pace and economic growth of the South inevitably will continue to quicken if given proper nourishment. Any number of statistics can be cited to point up the progress of the past decade. As a case in point, Department of Commerce statistics show that the seven Southeastern states outpaced the rest of the nation in economic expansion during the post-war years in 1946 through 1958. During that period, the number of manufacturing establishments in the Southeast increased from 23,245 to 32,651, or 14 per cent faster than anywhere else in the U. S. During the same years, manufacturing employment in the South rose 20.4 per cent, compared with a .6 per cent decline throughout the country. It is generally agreed that the South's Number One problem is that of providing a pool of skilled workers to keep pace with its economic potential. The pace of future growth will depend in good part on how well this problem is met."

Andy Griffith, Television and Motion Picture Star: "I appreciate it. The South continues to be on the rise, and the next ten years will perhaps be the biggest and most important in the history of the Southern states. Industry has progressed to the point where now the rest of the country looks to the South for its many manufactured products, as well as its produce from farming. I am proud of this progress."

George V. Allen, Director, U.S. Information Agency, Washington, D. C.: "As a Southerner, it is with deep personal interest and pride that I watch the commercial, industrial and agriculture progress being made by the burgeoning South. It is an area of tremendous potential reaching for fulfillment."

L. L. Colbert, President, Chrysler Corporation, Detroit: "A sweeping industrial upsurge has been in progress through the South since the end of World War II. To me, as an automobile man, one facet of this vibrant and dynamic progress is particularly interesting. It is the tremendous increase in automobile registrations. Back in 1945, passenger car registrations in 16 southern states and the District of Columbia totaled 6,213,430. By 1959, car registrations in these same states had increased to an estimated 16,904,000, a jump of more than ten and one-half million cars. This regional rate of increase is substantially higher than the national increase rate. It is obvious that the South is a vigorously growing market for automobiles. The South plays an important role in Chrysler Corporation production and as a supplier of products used in our manufacturing and assembly operations. In recent years Chrysler has put in operation a training center at Atlanta, Ga. Chrysler's Missile Division has nearly 1,000 employees at Huntsville, Ala., to supply engineering services to the Army Ballistic Missile Agency and the Army Ordnance Missile Command on Redstone and Jupiter missiles and other Army and government-sponsored space projects."

Harry A. DeButts, President, Southern Railway System, Washington, D. C.: "We on Southern Railway believe that the future of American industry is going to be shaped in the South. Both the past decade's record and informed predictions about the next ten years convince us that Southern should go on planning and building on the basis of this belief. Recently, Southern representatives discussed the outlook for industry with the heads of all the state development departments in our territory. Without exception they assured us that they confidently expect growth in the Sixties as great as — or greater than — the industrial expansion the South has known in the past ten years. From 1950 through 1959 there were more than 3,200 new industrial developments along Southern's lines — new industries, large new warehouses and distributors, and major additions to existing plants. More than \$5 billion was spent in constructing and equipping these new plants and expansions. They created the prospect of more than 194,000 new jobs. Southern's planning is as detailed and complex as the growing industrial South it will serve. But its aim can be expressed very simply. We intend to go on aiding the economic growth of the South in every way possible — with our primary purpose one of providing the best rail transportation service available anywhere."

F. J. Mayo, President, The Ingalls Shipbuilding Corporation, Pascagoula, Miss.: "The most significant, and perhaps the greatest, progress made in our field of activity has been bringing to the Gulf South region nuclear submarine construction — heretofore a capability of East Coast and Naval Shipyards. The entry by Ingalls into naval nuclear-powered submarine construction was prompted largely by its confidence in the future of nuclear propulsion and its confidence in the Gulf South region; plus the need for a balanced shipbuilding program, due to the lack of private and Maritime ship construction. Ingalls is currently engaged, having competitively secured U. S. Navy contracts in the construction of three nuclear-powered submarines, with the keel of the fourth to be placed soon. Important developments anticipated in our field during the next few years will, primarily, be the continuation in the construction of nuclear-powered submarines, plus the construction and conversion of Navy combatant and support missile ships. It is my opinion, gained from national experience, that the Gulf South is in a most favored position for new industrial development as the trend of industry is to seek locations that have resources, facilities and the room to grow, plus unlimited public support. The Gulf South region has that combination."

Ben S. Gilmer, President, Southern Bell, Atlanta: "The year 1959 saw several new records set in the telephone field in the South. And the year climaxed telephony's busiest and most progressive decade. In the nine states served by Southern Bell, this Company added more telephones than in any year — about 550,000. Our telephones more than doubled in the fifties, and we ended the year with 6,825,000. Great progress was made in developing and extending the introduction of new instrumentalities and techniques, including customer long distance dialing."

This progress will continue in the sixties. Telephone users will have a more convenient and pleasing service, even, than they have today. We are designing and building these services and instrumentalities in confidence that the South is on the threshold of its greatest decade of progress. Our region in the sixties, in my opinion, will continue to take big strides forward in its continuing parade of progress."

Arthur V. Wiebel, President, Tennessee Coal & Iron Division, Fairfield, Ala.: "Events in both war and even more so in peace during this century have tended to elevate the South to higher and higher plateaus of industrial achievement. This accomplishment has been aided by the availability of natural resources — resources which have been so often described that they need not be detailed here."

"The South has a record of prodigious efforts when the times required them. But must we wait for opportunity to be thrust upon us? A united effort by our people — maintained day-by-day — is the answer if we are to achieve optimum progress in our section. As a region we should constantly devote more attention to developing business within our own area. Who knows how many markets are available at our doorsteps — if we would only recognize and develop local potentials?"

(Continued from page 7)

it in many ways. I anticipate that industry will continue to move South in the years ahead. This will be not only because of the region's many natural advantages, but also to reap the obvious benefits of a nearness to consumer markets whose purchasing power has increased so tremendously within the past decade. The L. & N. definitely has confidence in the South. Since World War II it has spent nearly one-half a billion dollars for improvements to its physical plant, much of the expenditure with an eye to the South's future growth."

FRANK P. SAMFORD, PRESIDENT, LIBERTY NATIONAL LIFE INSURANCE COMPANY, BIRMINGHAM, ALA.: "Tremendous progress has been made in recent years in the sale of life insurance in the South. For example, in the four years, 1955 through 1958 the amount of life insurance in force in the twelve southeastern states increased by 62 percent compared with an increase in the nation as a whole of less than 50 percent. In general, sales in the southern states and in the western states have shown the greatest percentage gains in the nation. Part of this can be attributed to the economic gains and population growth that has taken place in the South. Credit must also be given to the formation of new life insurance companies in the South and to the growth of local southern companies. For example, in our own state of Alabama, 41 percent of the life insurance premiums paid by Alabama citizens in 1955 were paid to companies domiciled in the state."

M. E. GRANT, PRESIDENT, PLANTATION PIPE LINE COMPANY, ATLANTA: "Growing with the Southeast has meant to Plantation Pipe Line Company one major expansion after the other—from 100,000 barrels per day in 1950 to 332,000 barrels per day in 1960. While leveling off slightly, this trend of expansion will continue into the present decade with perhaps a capacity figure in 1967 of 400,000 barrels per day. While we expand our facilities, we are going to continue with our rather extensive search for better and more economical ways to operate our system. We will be improving our scheduling and dispatching procedures by the use of a computer and other related equipment. We will continue to improve and utilize remotely controlled pumping stations. These and other improvements have stabilized many operating costs and are responsible for tariff rates which are today slightly below the rates of 1942."

ALEXANDER NUNN, EXECUTIVE EDITOR, THE PROGRESSIVE FARMER, BIRMINGHAM, ALA.: "Ever since the beginning of World War I, Southern agriculture has been changing. Those changes are continuing today at an accelerated rate. We expect to see mechanization much more complete than it is now. There is renewed interest in making a paying crop of cotton. We believe we are on the verge of bale to bale-and-a-half per acre yields as an average. Without question, irrigation for tobacco, cotton, corn and other crops will be multiplied many times in the next decade."

L. E. OLIVER, VICE PRESIDENT, SEARS, ROEBUCK AND CO., ATLANTA: "The Dixie retail sales trend, which we expect to continue upwards at better than the national average in the next few years, reflects not only a thriving pace for industry but improving living standards for the people of the South. This consumption of consumer goods gives positive indication of the rising buying power and well being of our

people. The production of consumer goods in Southern plants will increase sharply in the Sixties to meet the growing demands of the Southern market, and for distribution throughout all America. Sears will make substantial investments in expansion in the first half of this new decade of progress."

C. M. NICHOLSON, JR., COMMISSIONER, DEPT. OF CONSERVATION AND ECONOMIC DEVELOPMENT, DIVISION OF INDUSTRIAL DEVELOPMENT, RICHMOND, VA.: "The record of the past year of industrial development indicates continuing growth in the immediate future. Seventy-six new manufacturing plants and 84 expansions were announced during 1959 as being already in operation or due to commence operation in 1960. It is anticipated that these new plants and expansions will add around 10,000 to Virginia's manufacturing pay-rolls. Notable increases were made in synthetic fibers and plastics, fabricated metals, and apparel manufacture."

DR. WALTER B. JONES, STATE GEOLOGIST, UNIVERSITY, ALA.: "Utilization of most of Alabama's mineral resources is increasing steadily; notably cement, clays, natural gas, petroleum and stone. However, there has been a severe decline in production of iron ore, because of imported ores. Output of coal should increase, or, at least, hold its own, to supply demands of expected sharp increases in steam electric generating plants. Coke will follow the pattern set by the iron and steel industry. There has been an enormous increase in the use of water, both surface and ground. That trend is expected to continue until the absolute potential is reached. Alabama has lots of water. Oil is destined to increase greatly in Alabama. The Citronelle field, in Mobile County, now has 235 producing wells, from less than 10,000 acres. It is fully expected that Alabama will become a major oil and gas producing state."

T. W. MARTIN, CHAIRMAN, ALABAMA POWER COMPANY, BIRMINGHAM: "More new industries located in the Alabama Power Company's service area in 1959 than 1958 and more existing industries announced expansion plans. These new and expanded industries represented a capital investment of \$84,096,000 and created 8,847 new jobs. Both of these figures are substantially higher than the corresponding ones for 1958. Expansion of existing industry is especially gratifying since it proves Alabama has what is necessary for industry to be successful. We have an ample supply of productive labor, a great variety of plentiful raw materials, and a market that is expanding rapidly because of the continued increase in per capita income. Based on the number of inquiries the Industrial Development Department is now receiving, we expect 1960 to continue to show improvement."

JAMES B. THURSTON, MANAGER, INDUSTRIAL DEPT., MEMPHIS CHAMBER OF COMMERCE, MEMPHIS, TENN.: "Memphis and Shelby County, since 1949, has acquired 318 new manufacturing plants involving a capital investment of over \$97,110,000, bringing our total number of manufacturers to over 800. In 1959, 29 existing firms expanded their operation facilities, involving an additional investment of \$17,318,000 and establishing 1,011 new jobs and additional payrolls of approximately \$3,680,000. The total manufacturing payroll in Memphis for the past year was \$183,972,268—an increase of 38% over the 1950 payroll. Bank debits reached an all-time high of \$10,906,235,215. The \$50,000,000 Memphis harbor and industrial area provide Memphis with a

deep, still-water harbor with terminal facilities to accommodate industry in which river-rail transportation is of essence. We are confident that during 1960 our progress in helping to industrialize the South will parallel and possibly exceed the development experienced during 1959."

C. K. LILLER, CHAIRMAN, LILLER NEAL BATTLE AND LINDSEY, ATLANTA: "For many years, manufacturing in the South was largely confined to raw materials. In the textile industry, for example, our southern mills produced the basic gray goods or 'Southern Plaids' which were sent to New England for finishing, printing and marketing. Consequently, there was little need for merchandising and advertising as we know them today. The growth of advertising in the South has paralleled our gradual emergence from the position of a raw materials producer to that of manufacturer of finished, merchandisable products. This development started back in the early 1900's, but it has really only been since World War Two that the South generally, and Atlanta specifically, have begun to rival other areas and cities in the quality and quantity of advertising we are producing. It is a safe prediction that the South is slated for continued industrial growth and it is equally safe to predict that our advertising agencies will continue to expand accordingly."

DR. HAROLD VAGTBORG, CHAIRMAN, SOUTHWEST RESEARCH CENTER, SAN ANTONIO, TEXAS: "In recent years, Southern leaders have recognized increasingly that scientific research is of great importance and value in industrial and economic development. In the years ahead, research will be emphasized even more in our colleges and universities, and, at the same time, research organizations created to serve industry in the South will grow and increase in numbers."

ROY G. HEMMINGHAUS, VICE PRESIDENT, THE CHEMSTRAND CORPORATION, DECATUR, ALA.: "The South with its vast reservoir of intelligent people, its abundant natural resources and its generally favorable climate has had a far greater rate of industrial growth than any other section of the nation since World War II. During that period, it has increased its industrial output six-fold. Current estimates and projections, for the next 10-year period, indicate that it will continue this dynamic growth. Recent figures published by the Manufacturing Chemists Association show that of all chemical plants in construction or planned in the United States for 1959-61, more than 63 percent are located in the South. Evidence of Chemstrand's continuing confidence in the South can be found in the fact that we now have a nylon plant in construction at Greenwood, South Carolina, and are building a new research center in the Research Triangle Park area of North Carolina."

H. GAULT BRAXTON, PUBLISHER, KINSTON DAILY FREE PRESS, KINSTON, N. C.: "I think there has been a great deal of progress in the newspaper field in the South in the past third of a century. Circulations have multiplied and members of the State and Southern Newspaper Publishers Associations have manifested a much greater interest than they had heretofore, I believe. I anticipate continued progress and development with better edited, finer typographical work, improved picture services, increased telegraphic and columnist content. Southern born (a native of Virginia) and living all my life in the South principally Alabama and North Carolina, I am confident that this section has greater possibilities for development in every phase of life,

(Continued on page 12)

SOUTH'S CHEMICAL STUDIES HIT A NEW HIGH IN 1959

During the year there were 3,905 articles in the chemical research field originated in the South, a gain of 354 reports over the total recorded for 1958. Tennessee made the largest gains.

By John R. Sampey and Jewell C.
Sampey, Furman University

The South bounced back from the 1958 recession to its highest peak in scientific publications in 1959. Fifteen southern states published 354 more chemical articles last year than during 1958. Fourteen of the 15 states recorded a gain over the showing of the previous year, with Tennessee registering the largest increase (501 to 611 articles), and Georgia pushing up from 139 to 186 publications. Oak Ridge was largely responsible for the advance of Tennessee, with a gain of 347 to 419 articles, while Emory University doubled its scientific productivity (39 to 82 articles) to thrust Georgia to a new high mark.

An oversight in failing to tabulate 49 articles from the government laboratories of Louisiana in last year's Blue Book report (Sampey, J. R., *Ind. Development* 128, p. 8, Blue Book Edition, 1959) cut down the 1958 totals by that number. The corrected total for the 15 states in 1958 is 3905 articles published in **Chemical Abstracts**. The total number of publications abstracted in this key to the world's chemical literature in 1959 was 4259, showing a gain of 354 articles.

Academic institutions continue to bear the brunt of scientific research in the South (Table I). Twelve institutions now have published 400 or more articles since July 1950. The showing of these leaders is: U. of Texas 1710 articles, Hopkins 1579, Duke 1039, U. of Florida 792, U. of Maryland 862, U. of Tennessee 646, Louisiana State 590, U. of North Carolina 542, Texas A. and M. 523, U. of Virginia 514, Tulane 424, and Vanderbilt 403. The U. of Oklahoma with 398 and North Carolina State with 396 are knocking at the door of this select company. Table II lists the contributions from academic institutions in 1959.

Publications from the industrial laboratories of Oklahoma and West Virginia showed the largest gains over 1958. Attention has already been directed to the striking increase in activity at Oak Ridge; the government laboratories of Maryland and Louisiana continue to spark chemical research in these two areas, while the Savannah River Project of AEC published more chemical papers last year than originated from all other sources in South Carolina.

educational, industrial, agricultural and general welfare than any other like territory in this or any other country."

S. L. LATIMER, JR., EDITOR, THE STATE, COLUMBIA, S. C.: "If the South is to progress, and it is progressing, it must have a strong press, appreciative of the region's great potentials, and anxious to do its part in making the region a desirable place in which to live and in which to do business. And I believe the press, taken as a whole, is meeting its responsibility."

"As to the region's growth, it has just started. The remarkable expansion that has been experienced since World War II, when, industry at long last found the South, is but a curtain raise, in my opinion, to what is ahead. But let's hope the South absorbs industry rather than lets industry absorb it."

WILLIAM P. SAUNDERS, DIRECTOR, DEPT. OF CONSERVATION AND DEVELOPMENT, RALEIGH, N. C.: "North Carolina has made outstanding progress in the field of industrial development during the past five years. It expects to intensify this development in 1960 and in the years to come as more and more of its citizens work for increased industrial payrolls for their respective communities. During the past five years more than \$1 billion have been invested in 1,937 new and expanded manufacturing facilities in North Carolina. These new and expanded industries provided jobs for more than 109,000 workers and payrolls annually of almost \$341 million. Under the leadership of Governor Luther H. Hodges and with increasing numbers of its citizens giving their time and, in many instances, their own money, North Carolina has made remarkable progress in providing more industrial employment for its people, whose willingness to work and whose productivity on the job continue to draw highly favorable comments from their employers."

S. B. BRASELMAN, EXECUTIVE VICE PRESIDENT, AMERICAN CREOSOTE WORKS, INC., NEW ORLEANS: "My confidence in the future of the South, especially the Central Gulf South, remains completely unshaken. This area has so many natural advantages that it cannot help but progress and prosper for many years to come."

T. F. X. MCCARTHY, HEAD, INFORMATION DEPT., OAK RIDGE INSTITUTE OF NUCLEAR STUDIES, OAK RIDGE, TENN.: "Thirty years ago in the depths of the great depression, the immediate outlook for the South seemed bleak indeed, for southern industry was still embryonic, farm land exhausted, soils eroded, and educational facilities inadequate when economic distress descended on the country. As human institutions and economic development go, thirty years is an exceedingly brief period, yet in this short time the development of the South's economic, industrial, and cultural potential has been phenomenal. During this general renaissance of the region, there sprang up in the middle of the wild hill country of East Tennessee large, well-staffed, research facilities related to atomic energy. Coupled with the unprecedented development that the South was already experiencing, the existence of tremendous scientific facilities in its very midst gave the region provocative opportunities to play a vital and significant role in the progress of the nation's atomic-energy program."

EDWIN D. HARRISON, PRESIDENT, GEORGIA INSTITUTE OF TECHNOLOGY, ATLANTA: "In this age of contrast and rapid change, it is Georgia Tech's

concept that plans for present and future improvement of our educational offerings must be kept flexible and open to change. The quality of undergraduate technological, scientific, and management education is closely related to associated programs in graduate study and research. A selective process for the admission of those students inherently capable of handling their academic load is essential if qualitative instruction is to be maintained. The programs of study must undergo continual revision if they are to provide the graduate with a background sensitive to the field and community in which he will work—which means in our case the South, where the majority of our graduates wish to live. The revision of technological curricula first gained impetus in the immediate post World-War-II years and was greatly accelerated by the technological and scientific advances of the 1950's. Major efforts in this revision were concentrated in reducing the amount of purely descriptive material and the amount of training in the skills and in eliminating some of the outmoded, traditional courses. This trend — generally regarded as a favorable step by a majority of both engineering teachers and practicing engineers — will undoubtedly produce a more capable and a more versatile product for the future industrial growth of the South."

HARRY LEE, EXECUTIVE DIRECTOR, COMMITTEE OF 100 OF MANATEE COUNTY, BRADENTON, FLA.: "1959 will go down in history as a big year here on the West Coast of Florida. The new decade starting with 1960 will undoubtedly open enormous new vistas. We now have natural gas available, money appropriated for further extension of the West Coast Inland Waterway — the Federal Highway grid system is started and hundreds of other local projects are on the way. The future looks bright indeed. More and more industries are looking this way — more and more industries are realizing that here is a burgeoning consumer market. The 1960's will be big years in Florida. The 1960's will show great strides in Manatee County — double the population and more — a trebling of the industrial payroll, and a commensurate growth in all the economic factors."

JOSEPH WEIL, DEAN, COLLEGE OF ENGINEERING, UNIVERSITY OF FLORIDA, GAINESVILLE: "The last two decades have shown a tremendous increase in the QUALITY of education in the South — and this is particularly true of the physical sciences and of engineering education. At the end of the last war, very few southern universities had graduate schools in engineering and I question whether any were giving the doctoral degree. Today in every southern state, worthwhile graduate programs are under way in many engineering colleges. This rise in quality education has probably been even greater than the upswing in industrial development."

FRANK A. ROSE, PRESIDENT, UNIVERSITY OF ALABAMA, UNIVERSITY, ALA.: "Tremendous progress is being made at all levels of education in the south, and this is being demonstrated in the activities of the state legislatures where excellent increases in appropriations are being made. Within recent years most of our southern states have had bond issues approved for the construction of new educational buildings. A recent report of the Southern Regional Education Board showed the progress that is being made at all colleges and universities on behalf of research. Most of this research is being done in the area of developing southern natural resources.

This will cause many industries to move to the south because of the opportunities afforded them by the research that is going on. I have every confidence that the south is becoming one of the most dynamic areas in the United States and with our natural resources we will become one of the most vital areas to our nation's economy."

ALLAN T. GWATHMAY, PROFESSOR OF CHEMISTRY, UNIVERSITY OF VIRGINIA, CHARLOTTESVILLE: "The Science of Solids which is concerned with the physical and chemical properties of metals and refractory materials received a big boost in the South by the arrival of Professor J. W. Mitchell, F.R.S. and formerly of Bristol University, to become Professor of Physics at the University of Virginia. Professor Mitchell is a pioneer in the Physics and Chemistry of Solids and was the first to explain the photographic process through the action of dislocations. Active work is being carried out in this promising field of solids in both the Universities of Virginia and North Carolina. Because of this work and work in other institutions in the United States and abroad, it seems reasonable to expect that metals of greatly increased strength and metals of controlled chemical activity will be produced in the future."

R. BLACKWELL SMITH, JR., PRESIDENT, MEDICAL COLLEGE OF VIRGINIA, RICHMOND: "The rapid industrial development of the South is accompanied with equally striking progress in many fields, including the medical sciences. As a matter of fact, the strengthening of our professional schools and general programs of education is one of the important factors in the evolution of the region as the nation's land of opportunity. The Medical College of Virginia is one example of this trend, which is abundantly evident in numerous institutions throughout the area. The awareness of the Southern people of the need for more highly trained personnel in the health professions and their willingness to increase support of professional education are playing major roles in the development of our medical centers into the peers of any in the United States. In research particularly, the voice of the South is being heard in resonant tones."

RICHARD J. WELSH, DIRECTOR, DADE COUNTY DEVELOPMENT DEPT., MIAMI, FLA.: "Employment continues to be the great generator of our population explosion. By Thanksgiving this year we will reach the 1,000,000 population mark. By 1970, a total of 1,300,000 of our population will be old enough to work and 740,000 of these will be at work or ready for employment. At present rate of area growth, the 2,403 individual manufacturing plants here today will reach nearly 2,700 by the end of 1960 and 4,000 plants by 1970. Transportation, particularly pure-jet airline passenger service is high up. Six major airlines now operate pure-jets into and out of our new \$78,000,000 Miami International Airport terminal. We enjoyed a good year in 1959. Today 1960 looks excellent."

H. M. AYERS, PUBLISHER, THE ANNISTON STAR, ANNISTON, ALA.: "The outlook for this immediate region is very good indeed, with the exception of the first strike we have had of any consequence in the cast iron pipe business in more than thirty years. For your information, The Anniston Star is now well ensconced in its new million dollar building, and the D. S. Kennedy Company, which manufactures transformers and other operations in the electric field, is rapidly conditioning its plant for full production. The Alabama Power Com-

(Continued from page 12)

pany is going ahead with its development on the Coosa River, and efforts are being intensified by way of developing that stream all the way from Rome, Georgia, to Mobile."

H. F. COTTON, ASST. VICE PRESIDENT, NORFOLK AND WESTERN RAILROAD, ROANOKE, VA.: "The merger of the Virginian Railway into the Norfolk and Western Railway Company, as of December 1, 1959, is evidence of the faith of the Norfolk and Western in the economic potential of the South. This merger with its cost savings and opening of new industrial property will enable the N&W to serve more effectively and efficiently the needs of its current and future customers, many of whom are in or looking toward that region classified as the South. Industrialists are looking toward the South not only as an area where markets are expanding, but also where new technological advances and processes can be located in new facilities. Per capita income and population will grow in the South during the next decade at rates above that of the United States average. As this occurs, additional industrial opportunities will develop requiring the concerted effort of many to realize. It is the intent of the N&W to do its part to contribute to a growing South."

WALTER O. WALKER, DEAN, DIVISION OF RESEARCH AND INDUSTRY, UNIVERSITY OF MIAMI, CORAL GABLES, FLA.: "We at the University of Miami expect our research activities to increase in intensity and scope. The dedication of a new research 8-story laboratory building for the School of Medicine means more and better research in the field of medicine. Our constantly growing research efforts in oceanography have resulted in new and expanded research facilities and buildings at our Marine Laboratory. Engineering research is just getting started. We anticipate rather spectacular developments in all fields of research especially in the south. The establishment of research centers in proximity to our larger universities is sure to come; in fact they exist on an informal basis in many institutions now. In other areas it has been formalized as in the case of the Research Triangle in North Carolina."

R. B. ROBERTS, VICE PRESIDENT, FLORIDA POWER & LIGHT COMPANY, MIAMI: "The Florida Power & Light Company is privileged to serve approximately 44% of all the people of Florida. Our territory's highly diversified economic pattern is reflected in its rapid and more importantly — its steady growth. Since 1950, in spite of two national recessions and a steel strike, our customers have increased rapidly and steadily from 328,000 to 729,000. We look forward to a continued rapid development of our vacation business and an even more rapid expansion of our manufacturing. To adequately and promptly meet this anticipated continued rapid expansion, we currently have under construction and under contract for construction a total of 780,000 KW in additional system generating capability to be in service by the end of 1962. That's an increase of 47% in three years; 240,000 KW addition by the end of this year, another 240,000 KW by the end of 1961 and a 300,000 KW addition by the end of 1962."

PHILIP G. PORCHER, PRESIDENT, SOUTHEASTERN COMMUNITY DEVELOPMENT ASSOCIATION, CHARLESTON, S. C.: "In the South, community development in some form has been practiced since America was first settled. However, during the past decade civic and business leaders have been study-

ing and working toward more logical and scientific approaches to the problems of stimulating our communities to AN AWARENESS of their needs and opportunities. During this period community development organizations have raised the social, cultural, and economic level of people immeasurably. Every community is interested if the glamorous words "new payroll" are mentioned; however, during the next few years more and more communities will do (1) a thorough job of planning and developing their physical properties, and (2) inaugurate an educational program for improving their industrial climate, resulting in new industries seeking them. LOOK TO THE South for progress in the right direction."

CHAUNCEY W. LEVER, VICE PRESIDENT, SOUTH CAROLINA NATIONAL BANK, COLUMBIA: "1960 should be a banner year for South Carolina. The State of South Carolina has averaged about \$100,000,000 annually in new and expanded industries since World War II. In 1959, \$207,000,000 was invested for new plants and plant expansions. With the added emphasis being given to industrial development, the 1959 level should be achieved or exceeded in 1960. The South will continue its rapid industrialization primarily because of the character and ability of its people, its growth as a market, and its natural resources. The strengthening of the financial resources of the South is a cause and a result of its expanding economy. Banks in the South have 20 percent of the banking assets of the United States, while southern insurance companies have 26 percent of the value of all outstanding policies. The 60's should be a decade of dynamic accomplishment for the South!"

MARVIN T. EDMISON, DIRECTOR, RESEARCH FOUNDATION, OKLAHOMA STATE UNIVERSITY, STILLWATER: "Anyone who reviews the research programs of southern colleges and universities and compares the financial statements for the various research agencies of these institutions will see that there has been a tremendous growth of research activity in the institutions of higher learning over the last decade and that this growth trend is increasing. This increase has had and will continue to have a great effect on the retention of outstanding staff members in southern institutions and upon attracting other outstanding persons to the South. This, in turn, means that students in the South will have ever increasing opportunities for good education in their own "backyards" and that industry will have the opportunity to educate its personnel. Furthermore, the results of the research can and will be exploited by industry in the furtherance of its objectives."

J. E. COPENHAVER, CHIEF CHEMIST, SONOCO PRODUCTS COMPANY, HARTSVILLE, S. C.: "Prognostication must be based on a careful study of the past and present. If we look at the development of the South during the last half century, one can see a warm glow on the horizon. The whole spectrum, with few exceptions, promises a bright future. There is no field which holds a brighter future for serious-minded young men and women than the Pulp and Paper Industry. Present opportunities for technically trained young men are the best in the history of our region. We are approaching the time when we shall not have to export our most valuable crop — our boys and girls — for them to find the fulfillment of their ambitions in their chosen fields. The Southern Pulp and Paper Industry is proud to classify this along with its other accomplishments in conservation for the South."

JACK COMPTON, DIRECTOR OF RESEARCH, INSTITUTE OF TEXTILE TECHNOLOGY, CHARLOTTEVILLE, VA.: "The first year of a decade, that may well be referred to as the "Golden Sixties," began with the brightest economic picture for the textile industry of the South since World War II. The momentum gained from increased sales and production during the last half of 1959, together with the demands created by an exploding population and depleted inventories of textile products, cause forecasts of unprecedented economic gains to be made for 1960. In the background of this economic pattern, research and education in textiles will be found to be playing important roles. In this new era in the textile industry that has been characterized as "revolutionary," a premium has been placed on new products, labor saving machines, procedures and processes. As a result of basic and applied research, a score of man-made fibers are now produced in the South, along with improved cotton and wool fibers. Many new dyes and apparel finishes augment the increasingly popular minimum-care fabrics."

F. WILLIAM BROOME, MANAGER, DEKALB COUNTY CHAMBER OF COMMERCE, DECATUR, GA.: "Serving one of the Atlanta Metropolitan Area counties as an industrial developer, I have noted definite progress in the willingness and ability of "Area Developers" in the South to work as a team in industrial development. Such activity is bringing into Georgia and other Southern States, at a faster pace, many new plants placed there by industrialists who were sold on the "Area", before selecting a particular city or town. I predict that the developers of the South who will be most successful in the next few years will be those who concentrate on "Research", as the most effective tool in acquiring new industry. It is in the South where new products, new production methods, new labor relations plans, and new concepts of industrial progress will work best."

GEORGE D. PALMER, SCHOOL OF CHEMISTRY, UNIVERSITY OF ALABAMA, UNIVERSITY, ALA.: "In the South there has been great progress in the applications of science, with some improvement in the basic sciences. Increased facilities for graduate school instruction are still needed. With the per capita income of the southern states rising faster than the national average, and with our well-known excellent resources, we should continue to lead the nation in industrial expansion. I believe there will also be a great increase in our tourist trade, as well as in industrial production."

A. G. THOMAS, CHARLOTTEVILLE, VA.: "It is of course widely known that the South is making rapid progress in electronics and electrical manufacturing generally. Plants are going up all over the South but Florida and Texas are advancing very rapidly in these fields. Several important developments now under way and likely to increase in importance in the next few years are semiconductor elements including rectifiers and transistors, automatic controls including tape controls for machine tools, and the direct conversion of heat to electricity without rotating machinery. In view of the momentum already acquired and the awakening sense of industrialization in the South nothing can stop its progress."

DONALD S. KENNEDY, CHAIRMAN, OKLAHOMA GAS AND ELECTRIC COMPANY, OKLAHOMA CITY: "Electric utilities are continuing to have an important part in the economic growth of the

(Continued on page 16)

GEORGIA STATE COLLEGE TAKES OVER SASI DUTIES

A significant move in the development picture in the South was the appointment, announced in March, 1960, of Georgia State College to take over the administrative and research activities of the Southern Association of Science and Industry.

The two-year contract with the Atlanta institution was signed by SASI President J. D. Wise, of Hazelhurst, Mississippi, and approved by the board of Regents of the University System of Georgia. Under the new arrangement, the SASI program will be administered by George E. Manners, dean of the school of Business Administration at Georgia State, and Dr. Willys R. Knight, director of the Bureau of Business Research, who are well known educational leaders both regionally and nationally.

Previously, SASI studies had been handled by Conway Publications, Inc., on a contract basis.

The shift in administration will be

the occasion for a comprehensive re-study of SASI program objectives, leading to more aggressive and extensive activity during 1960 and in future years.

Well equipped to handle the affairs of SASI, Georgia State is fully accredited in all its degrees and program offering. It now offers the degrees of Master of Business Administration, Bachelor of Arts, Bachelor of Science and Bachelor of Music.

Among the outstanding programs at the college within the framework of these degree offerings are the Teacher Education program, the insurance program with its actuarial science program, the real estate program, and the transportation program.

The Main Library of the College has approximately 112,000 volumes, and subscribes to more than 1,000 periodicals. It includes an extensive

collection of books and materials in the Business Law field. The College's Insurance Department also maintains an extensive library.

The College's Bureau of Business and Economic Research, through which the program of the Southern Association of Science and Industry will largely be operated, serves both industry and business as well as the State of Georgia. Researchers at the College, primarily those in the business field, will help SASI expand its program of studying development opportunities in the South.

Among the other resources available at Georgia State College for administering the SASI program are its new Computing and Data Processing Center, a statistics laboratory, and a production laboratory.

Many business and professional men and women come to the College to increase their potential and proficiency in their fields even though they hold degrees from colleges elsewhere.

Georgia State College itself has one of the most "degreed" faculties in the region. Out of 167 full-time faculty members, 93 — or nearly 60 per cent — hold doctoral or terminal degrees in their fields.

In addition to teaching, the faculty members engage extensively in research. Last year the faculty and staff published 10 books, completed 5 other books, worked on 18 additional books, published 13 research studies or papers, published 61 scholarly articles and 19 book reviews, and worked on an additional 48 research and creative projects.

There have been four distinct periods in the history of Georgia State College of Business Administration.

The earliest phase of its development began in 1914 with the creation of the Georgia Tech Evening School of Commerce. In 1932 the Board of Regents of the University System of Georgia made the growing institution a separate college under the name University System Center.

The College's third development phase began in 1947 when the Board of Regents incorporated the institution into the program of the University of Georgia as the Atlanta Division of the University of Georgia. In 1955 it resumed an independent status within the University System under its present name.

Dean George E. Manners (left) of the School of Business Administration at Georgia State College, and Dr. Willys R. Knight, director of the Bureau of Business and Economic Research, are the new administrators of the SASI program. They are shown in the Computing and Data Processing Center at the College.

(Continued from page 14)

South. The area we serve in Oklahoma and western Arkansas has had a vigorous growth over the past decade. Our own revenues have grown at a compound rate of about 10 percent per year, or a doubling in eight years. This reflects the general growth pattern of the area. Many new major industries have moved into our service area within recent years and many established industries have expanded their facilities. The prospects for continuing industrial expansion look very promising."

ALLEN H. DOUGLAS, EXECUTIVE DIRECTOR, COMMITTEE OF 100, AUGUSTA, GA.: "We feel that the progress and industrial activity of the South is going to continue pretty much at the same level which we have experienced in the past several years. I expect the same trend to continue, in that the type of industry coming in will be material and labor oriented in the chemicals, electronics, and synthetic fields. Within the past two years, in this area which we call the Central Savannah River Area, comprising some twelve counties in Georgia and eight in South Carolina, we have experienced an investment by industry of more than \$105,000,000, generating additional employment for approximately 4,000 persons. All of these industries have been extremely well diversified. I am very optimistic about the future of this area and I feel that Augusta will come into its own, once we have completed the deepening of the channel on the Savannah River, from seven feet to nine feet, which will allow towns of considerable size to reach this area."

CHAS. H. FLORY, STATE FORESTER, SOUTH CAROLINA: "The past, present, and future economy of the South is closely related to the extensive and valuable

forests that constitute one of the region's most important natural resources. More land in the southern states is in forest than in any other land use, and forest industries are one of the major sources of income and employment in every state of the South. If future needs and demands for paper products and other forest products needed for our growing population are to be met, much of the increased production must come from woodlands of the South. Major expansions in pulp and paper production in the South in the last five years have led the nation, and future expansions in this giant industry appear inevitable."

RUTH GAIL CONGER, SECRETARY, ASSOCIATED TRANSPORT, INC., CHARLOTTE, N. C.: "The Trucking Industry in the South is keeping pace with the new demands of a growing economy. Capital investment in additional modern rolling stock and terminal facilities is attuned to the times. Diversified and versatile transportation services assure Southern Industry of a favorable competitive position in both regional and long-distance markets. The continuing development and expansion of existing industry, decentralization, increased technical know-how, and expanding markets in the Metropolitan areas for our finished products, together with increased purchasing power of the Southern market, will add to the substantial growth momentum already generated. The added value of manufacture and the per capita income of the South is on the uptrend and I envision a sound economic and cultural growth above national average in this young industrial area of our great Country."

PAUL QUATTLEBAUM, CONWAY, S. C.: "When Thomas Edison was a man, I was a boy. In my lifetime I have seen

the electrical industry, as an industry, grow from individual generating plants with local distribution to the immense interconnected transmission system of today. Build what you may, anywhere you might choose in the South, and adequate cheap electric power is available. This being true, the South will continue to develop industrially."

THOMAS G. LYNCH, DIRECTOR INDUSTRIAL DEVELOPMENT, PIEDMONT AND NORTHERN RAILWAY COMPANY, CHARLOTTE, N.C.: "The Piedmont and Northern Railway, one of the nation's most successful short lines, serves six principal cities in the Carolinas. This central Piedmont area of both states has enjoyed a steady and healthy growth in commerce and industry during recent years. Charlotte, especially, has been a major factor in our success due to its emergence as a major distribution center for this thriving area. We are definitely optimistic about 1960. Charlotte appears to be accelerating its pace of growth, and the section of South Carolina we serve is proving to be highly attractive to new manufacturing plants."

HENRY C. GOODRICH, VICE PRESIDENT, THE POST ENGINEERING COMPANY, BIRMINGHAM, ALA.: "Our field of activity is primarily concerned with capital expenditure programs for industrial projects. We design and build productive plants for industrial clients throughout the United States. As an indication of the increase in activity in this field, our Birmingham office has grown from a force of approximately 40 people in 1946 to an organization of well over 300 at the present. We have performed many projects for clients in pulp and paper, metallurgical, synthetic fiber, cement, and other heavy industrial fields."

from **NORFOLK**
VIRGINIA'S LARGEST AND
"ALL-AMERICA" CITY

City of Norfolk
 Virginia

Office of the Mayor

Gentlemen:

The "All-America" City citation, recently awarded our City, indicates the citizens' spirited participation in its dynamic growth. Progressive Norfolk assures a healthy business climate, the primary factor for growth industries and business.

Realizing the needs of this nation's expanding industry, the City Council has established a City-owned 400-acre Industrial Park. The key to Norfolk Industrial Park's potential is its planning. Plant sites are flexible, yet designed and controlled. The Park is a restricted area with covenants to protect industry's interest and investments.

Norfolk Industrial Park is located only six minutes from both downtown Norfolk and the Class A municipal airport cargo and passenger facilities. Bounded by two major four lane highways, the Park offers reciprocal switching to eight major trunk-line railroads. Motor carriers assure overnight and rapid delivery to the major markets of the East. The world-famed Hampton Roads harbor makes importing and exporting facilities—foreign and domestic — readily available.

I personally invite you to write and let our staff send your firm a confidential survey of the many advantages of this area for your particular industry in Norfolk Industrial Park.

Cordially,

W. Fred Duckworth

W. Fred Duckworth
 Mayor

Member of Tidewater Virginia Development Council

BROKER COOPERATION INVITED

New from Provident . . .

GROUP LONG TERM DISABILITY INSURANCE

Provident's new Long Term Disability Insurance is a realistic answer to management's problem of how to pay disabled employees for long periods. Designed primarily for executives and key personnel, it also may be extended to include any class of employees.

Benefits are paid for 10 years or to age 65. And Long Term Disability Insurance eliminates the unknown liability of self-insurance. It is an excellent morale and goodwill builder that helps attract and hold quality personnel.

Ask Your Broker for Complete Details

CHOICE PLANT SITES IN THE SEABOARD SOUTHEAST

Along the thousands of miles comprising the Seaboard Air Line Railroad system, there are numerous plant sites, both large and small, where labor is plentiful and where conditions are highly favorable for profitable industrial operations.

It is in this area that industry has registered such outstanding growth in the past two decades. For a new plant or branch operations let us help you select a site in the Seaboard Southeast—the proven ground for industry.

An expression of your requirements will bring prompt recommendations, supported by detailed survey.

Address:

Warren T. White
Assistant Vice President
Seaboard Air Line Railroad Company
Richmond 13, Virginia

THROUGH THE HEART OF THE SOUTH

SOUTH'S GAINS

(Continued from page 16)

We anticipate that an increasing level of activity in this type work plus requirements for our type services in Government programs will require a continued increase in the size and scope of our activities."

FRED V. DOUTT, TECHNICAL ADVISOR, THE CHAMPION PAPER AND FIBRE COMPANY, CANTON, N. C.: "The paper industry will continue the pattern of expansion that has characterized the past decade, with new equipment and processes, slanted toward more complete use of the entire and dominant forest resources, rather than selective use of specific species. The integration of paper products with complementary materials promise some very exciting new developments with tremendous demand potential. In the area of economic and technical expansion, there seems no ceiling, but the deep rooted social problem that invades all areas of legislation, community and human activities will affect the rate and nature of new developments in many areas."

WARREN T. WHITE, ASST. VICE PRESIDENT, SEABOARD AIR LINE RAILROAD COMPANY, RICHMOND, VA.: "Industrial development in the South has shown notable progress in recent years. The principal factors influencing the South's industrial progress are abundance of raw materials and natural resources, adequate supply of native-born labor, mild climate, cheap power, good transportation facilities, favorable living conditions and a friendly attitude toward industry on the part of state and local governments. It can be reasonably expected that the next few years will witness further substantial expansion of the pulp and paper industry, the building of converter plants to utilize the paperboard and paper produced by the pulp and paper mills, the establishment of the machine tool industry, the building of manufacturing facilities in the electronics field and various appliances. We have full confidence in the South's ability to continue to advance in the field of industrial development."

PHIL CLARKE, MANAGER, INDUSTRIAL DEVELOPMENT, HIGH POINT CHAMBER OF COMMERCE, HIGH POINT, N. C.: "Eight years of concentrated effort by the Industrial Development Division of the High Point Chamber of Commerce has paid off well, with the securing of 44 new industries, mostly diversified, reflecting a total of 2,175 new employees with an annual payroll of some nine million dollars. The whole southeast will be affected by planned industrial growth and relocation and expansion of industry, and High Point, following the pattern of the last eight years, will certainly feel the impact of this national trend."

LAWRENCE WOOD ROBERT, JR., ROBERT AND COMPANY, ASSOCIATES, ATLANTA, GA.: "We are very much pleased with the progress of industrial development in the State of Georgia. What applies to the State of Georgia applies also in a great measure to all of our Southeastern States, but we do believe that here in Georgia we are really at the focal point of industrial development and that more and more projects of this nature will gravitate to our vicinity. Every year we are able to attract a large number of industries, both large and small, and each one adds as an inspiration to others and to the further flow of industry in our direction. The State of Georgia has been particularly fortunate on account of its very excellent location and so wonderfully supplied by fine utilities and natural resources."

THE BLUE BOOK STATISTICS

Here is a series of statistical tables presenting the latest figures on major facets of the economy of the South. Comparisons, made on growth reflected by information compiled in 1939, 1947, 1954 and 1959, show a steady uptrend in the region's over-all economy.

"Everybody is Ignorant, only on Different Subjects" — Will Rogers

**The New 95th Year Blue Book
Reports All Textile Plants!**

Old books are obsolete — expensive to use and unreliable! An enormous number of changes and great mass of new data is now available.

Davison's Textile Blue Book reports the entire textile manufacturing industry with dyers and finishers, all allied firms and dealers. The mill reports give details on each plant — date established, capital, executives' names, machinery operated, goods made and number of employees, as well as much other data. United States and Canada complete!

All Cotton and Woolen Mills are also Classified by Products made!

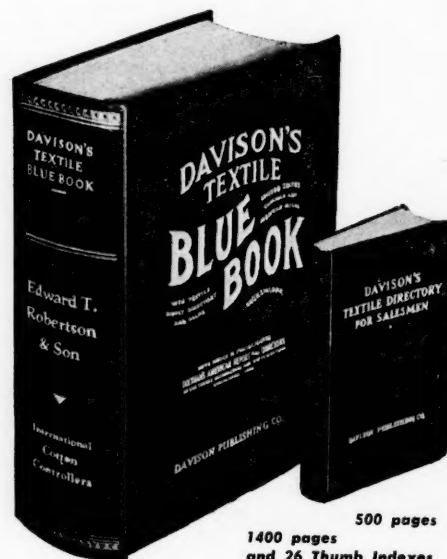

All Cotton, Wool, Waste, Yarn and other Dealers are Reported.

New Index to all cotton merchants, shippers, brokers, dealers, etc. in U. S. A. arranged alphabetically by name. Thumb indexes for instant reference to any section. Gold and cloth bindings. Easy to read type on quality paper.

For selling—for buying—for reference and for mail campaigns, in these changing textile days—you need this latest revision of the entire trade.

1960 95th Year Deluxe office edition \$9.75
1960 95th Year Handy size (not shown) \$7.25
1960 Latest Salesman's edition (mills only) \$5.75

*"Don't be ignorant on any part of
the Textile Industry."*

ALABAMA

Alabama's current governor is John Patterson, Democrat. The state capital is Montgomery.

In area Alabama consists of 51,609 square miles of which 51,078 are land and 531 water. Of the 3 million people now inhabiting the state, nearly all are native born. Population in 1959 totaled 3,260,000; in 1950, 3,062,000; in 1940, 2,833,000; in 1930, 2,646,000; in 1920, 2,348,000; in 1910, 2,138,000.

Among Southern states Alabama ranks first in production of primary metals, and high in raw mineral output of various kinds. Chief raw materials are cotton and peanuts, coal and iron ore.

Topographically the State presents unique diversification. In the extreme south is the coastline along the Gulf of Mexico with flat sandy land. Somewhat farther north begins a stretch of land known as the Black Belt which is extremely fertile. Still farther north is the coal and iron bearing section. The northern part of the state makes up part of the Tennessee Valley region and displays great scenic beauty.

LEADING INDUSTRIES

The following list of Alabama manufacturers employing over 100 workers has been compiled from many sources. Those particularly helpful in providing data for Blue Book files were the Alabama State Chamber of Commerce in Montgomery, and various chambers of commerce and local development groups throughout the state.

Water

Plenty of it . . . Almost any place
in the state.

It makes Alabama a preferred loca-
tion for industries requiring large
quantities of water for processing.

For full information on locations with
the human and physical resources re-
quired for your new plant write

ARKANSAS

The Governor of Arkansas is Orval E. Faubus, Democrat. Little Rock is the state capital.

Named after an Indian tribe of the same name, Arkansas has an area of 53,102 square miles of which 52,725 are land and 377 are water. Most of the inhabitants are native stock as were their parents and grandparents. In 1950 population was 1,910,000; in 1940 it was 1,941,000; in 1930, 1,854,000; in 1920, 1,752,000 and in 1910, 1,574,000.

Arkansas ranks high in output of mineral and forest products and is fast expanding heavy industry to process abundant raw materials into finished goods. Chief raw materials are cotton and rice, timber, coal bauxite and petroleum.

Topographically the State falls into four general sections: the Ozark Mountains stretching across the northern part; next southward the broad, fertile Arkansas River Valley; then the Ouachita Mountains in the south. Along the eastern border of the state lies the Mississippi River Valley, rich in cotton, corn, rice and sweet potatoes.

LEADING INDUSTRIES

The following list of Arkansas manufacturers employing over 100 workers has been compiled from

many sources. Those particularly helpful in providing data for Blue Book files were the Arkansas Industrial Development Commission, in Little Rock, and various chambers of commerce and local development groups throughout the state.

NOW BEING DISTRIBUTED NATIONALLY...

UNIFRAME BUILDINGS

by

arco

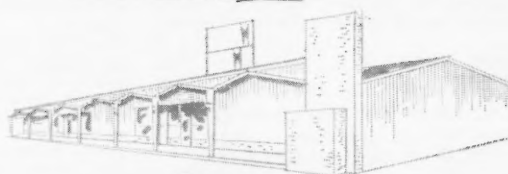

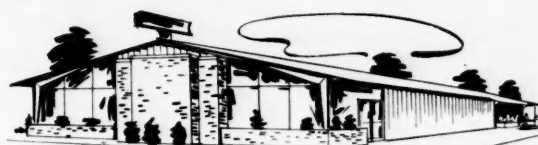

Varco . . . Uniframe . . . New names in your area? Not for long.

This pre-engineered building line is being introduced nationally after over 10 years of research and planning, and two years of test marketing in the southern United States. Acceptance was so great it was necessary for us to nearly double our new manufacturing facilities. It was inevitable we would offer our products on a nationwide basis. This is now being accomplished through a network of skilled distributors. In only a few months, they have erected Varco structures for industry and business in practically every section of the country.

The reason for success is simple. We have actually been able to build it better . . . for less. A Varco structure offers the usual advantages of steel rigid frame buildings . . . *plus* UNIFRAME CONSTRUCTION.

Uniframe means that nuts and bolts have been eliminated from the steel framework through a unique system of welded construction. It creates a solid building . . . a building of strength and beauty . . . and does it at low cost.

A complete line of buildings is available in clear span widths up to 120 feet. Fill out the coupon and find out more about Varco Uniframe Buildings—the better building . . . for less.

VARCO, Dept. 1D-1
P. O. Box 781, Pine Bluff, Arkansas

Send me more information about Uniframe buildings.
I'm interested in a building approximately _____ size
to be used for _____.

FLORIDA

LeRoy Collins, Democrat, is the current governor of Florida. Tallahassee is the capital City.

Florida, the Sunshine State, also the Peninsula State, extends deeply southward in the Atlantic Ocean to form the most southerly state of the South and of the United States as well.

In area the state is made up of 54,262 square miles of land and 4,298 square miles of water to constitute a total of 58,560 square miles.

In population, Florida is now third in the South and twentieth in the nation. Present population is 4,670,000, a great gain over the 2,771,000 in 1950; 1,897,000 in 1940; 1,468,000 in 1930; 968,000 in 1920; and 753,000 in 1910.

Chief raw materials are sugar cane, citrus fruits and tobacco, and phosphate rock. With substantial forest resources, Florida is a large producer of pulpwood, lumber and resinous chemicals. Also, the state produces in quantity most of the other agricultural products produced by Southern states, such as livestock products, vegetables both for fresh market and for canning, and to a large extent field crops. Finally, fresh water resources are among the best in the nation.

Topographically, the state is level and flat with a series of sand bars and islands along the east coast and with many bays and indentations along the west coast. On both coasts have been built some of the most noted resorts of the world. Off the southern tip of the Peninsula is a curving chain of islands called the Florida Keys, the most noted of which is Key West. Connecting the keys and mainland is the largest over-sea bridge in the world.

In the interior, Florida has many thousands of lakes and the largest remaining subtropical wilderness in the United States, the Everglades.

LEADING INDUSTRIES

The following list of Florida manufacturers employing over 100

FLORIDA

workers has been compiled from many sources. Those particularly helpful in providing data for blue Book files were the Florida Development Commission, in Tallahassee and various chambers of commerce and local development groups throughout the state.

- MANATEE OFFERS MORE OF THE MOST**
- Strategic location for those manufacturing, distributing or servicing their products in Florida and the Southeastern - Southwestern states.
 - Assistance in plant site location.
 - Excellent skilled and technical labor pool.
 - Ideal mild year-around climate for maximum working days.
 - Unlimited shipping and travel facilities, by highway, rail, air and water.
 - Located on major U. S. Highways, including world-famed Tamiami Trail.
 - Stable economy, due to diversified industry, business, research, chemical, electronic, farming and ranching activities.
 - Friendly cooperation by local government and the community.

"WE GROW KILOWATTS!"

That's Reddy's reply to the oft-asked question,
 "What do you grow in Florida?"

In the past three years, Florida Power & Light has added 660,000 kilowatts to its system, increasing the output 65% to approximately 1,650,000 kilowatts.

While Florida Power & Light Company has been doubling its capacity about every 4 or 5 years, the use of electricity has also doubled every 4 or 5 years.

Florida Power & Light now has under construction and under contract a total of more than a million kilowatts of new plant capacity. 240,000 kilowatts will be completed this year, 240,000 in April, 1961, 300,000 kilowatts in 1962 and another 300,000 in 1963, pushing total system capability to 2,730,000 kilowatts. This is part of a 5-year expansion program estimated to cost \$485,000,000.

FLORIDA POWER & LIGHT COMPANY

Helping Build Florida

**is teeming with
opportunities for
Business and Industry!**

Attracted by its mild, sunny climate, fast-growing population and purchasing power; plentiful supplies of labor, fresh water and electric power...and matchless recreational facilities—new industries are locating here in ever increasing numbers. Ask us for specification information about opportunities for success in your business! Address P.O. Box 1151, Pensacola, Fla.

LEWIS TERMINALS PLANNED AN IDEAL INDUSTRIAL PARK

The desirable location of Lewis Terminals in close proximity to all facilities necessary and vital to any industrial site is the result of years of planning. Centrally located between Cape Canaveral and Miami in the heart of the Palm Beaches, it offers:

- complete site readiness
- land, sea, air and rail shipping
- reasonable taxes
- ideal year-round climate and living conditions.

Minneapolis-Honeywell semiconductor division, Canada Dry Bottling of Florida and Arnold Bakeries are but the first of many firms to locate in Lewis Terminals. It's the ideal site for YOUR industry.*

GEORGIA

The present governor of Georgia is Ernest Vandiver, Democrat. Atlanta is the state capital.

In area the State consists of 58,876 square miles of which 58,518 are land and 358 are water.

The state falls into three general sections topographically. The northern part constitutes part of the long Appalachian range of mountains. In Georgia these mountains are known as the Blue Ridge. The region is highly scenic and rich in timber resources. Some of the finest marble in the Nation is to be found there.

Central Georgia is a plateau. This is the most densely populated section and the part of the state with greatest industrial development. The entire southern part of Georgia is a low plain reaching down to the Atlantic on the East and to Florida in the South. This section is rich in agricultural products and timber, and also is a recreational region of considerable note.

In population Georgia is making substantial growth. Present inhabitants number 3,900,000; in 1950 the number was 3,445,000; in 1940, 3,124,000; in 1930, 2,909,000; in 1920 2,896,000; and in 1910, 2,609,000.

Chief raw materials are cotton and peanuts, clays and stone.

LEADING INDUSTRIES

The following list of Georgia manufacturers employing over 100 workers has been compiled from many sources. Those particularly helpful in providing data for Blue Book files were the Georgia State Department of Commerce in Atlanta, and various chambers of commerce and local development groups throughout the state.

Electronics

Prepared by - Engineering Experiment Station
GEORGIA INSTITUTE of TECHNOLOGY

This is one of the opportunity reports prepared by Industrial Development specialists at Georgia Tech. It offers a wealth of valuable data, reflecting real potentials in this field. You will find many applications of these findings to your own operations.

We invite you to write for a free personal copy for your desk. Other available reports are listed for your attention.

If you want a report on some other specific manufacturing opportunity, write personally to Abit Massey, Director: Georgia Department of Commerce, 100 State Capitol, Atlanta, Georgia.

NEW AERIAL PHOTO shows Atlantic Steel Company's new rod and bar mill, one of the world's fastest steel rolling mills. In the background is part of the company's 200-acre plant on Atlanta's north side.

DIXISTEEL

a growing name in Dixie

AS the steel requirements of Southern industry have changed and grown, so have the facilities and services of Atlantic Steel — one of the nation's completely independent steel producers and suppliers.

In addition to a wide variety of bar and wire products supplied by our mill to warehouses, fabricators, and other carload users, Atlantic Steel Company offers:

- *Two complete Steel Service Centers in Atlanta and Birmingham—with a full range of carbon and stainless steels and aluminum products*
- *A complete line of Dixisteel Buildings*
- *Commercial hot-dip galvanizing facilities*
- *Industrial and commercial Chain Link Fencing*

Ability to supply quality products, backed by dependable service, is the key to the growth which enables Atlantic Steel to better serve a growing list of satisfied customers.

THE INDUSTRIAL BUREAU OF THE ATLANTA CHAMBER OF COMMERCE

Home Bases in The South for American Business

Fortune Magazine annually lists the 500 largest U. S. industrial corporations. Here's how these "blue chip" firms are represented in Atlanta:

- 100 actually make or assemble a product in Atlanta
- 220 maintain warehouses here
- 400 have sales or service offices, most of them regional.

Where national distribution is concerned, complete dominance of the Southern market has long been Atlanta's trademark. And Atlanta is ready *NOW* with every facility needed by a new or expanding company, no matter how large or small!

The Industrial Bureau, Atlanta Chamber of Commerce
555 Chamber of Commerce Building, Atlanta 3, Georgia

Gentlemen:

Please send me free booklet, "Facts in Figures About Atlanta"

☐ My company is interested in a Manufacturer's Representative

☐ Resident Salesman ☐ Sales Office ☐ Regional Sales Office

☐ Sales Office and Warehouse ☐ Manufacturing Plant ☐

KENTUCKY

The recently-elected governor of Kentucky is Bert T. Combs, Democrat. Frankfort is the state capital.

The state embraces an area of 40,598 square miles, including 417 miles of water surface, situated in the heart of the Ohio River Valley. It is bounded on the north by the Ohio River, which lies within the state for nearly 700 miles, and on the west by the Mississippi River, and is veined by a number of smaller streams, including the Tennessee and Cumberland Rivers.

Topographically, the state presents considerable variations. The eastern quarter, which abounds with coal and timber, is mountainous and extensively cut by streams. The Bluegrass region, occupying the north-central part of the state, is composed of an outer area characterized by knobby hill country and a larger center portion of rich rolling upland, famed for tobacco and thoroughbred horse farms. The south central and western sections range from rocky hillsides to rolling and level land, and contain

numerous caves and abundant surface and ground water supplies. In the northwest is a second major coal field, smaller and of lower relief than the eastern.

The state's population in 1959 was estimated at 3,180,000, an increase of 235,000 since the 1950 census. The inhabitants are almost all native born and about one-third are classified as living in urban areas. The state is divided into 120 counties and has three metropolitan areas: Campbell and Kenton Counties, which include Covington and Newport; Jefferson County which includes Louisville; and Boyd County, which includes Ashland.

The principal mineral resources of Kentucky are coal, petroleum, natural gas, limestone, fluorspar, clay, glass sands, and construction sands and gravel. In value of mineral output, the state ranks fifth among the sixteen Southern states and eighth in the nation; in coal alone it is the nation's third largest producer. The most important agricultural products are tobacco, livestock and corn. Timber is another leading resource.

LEADING INDUSTRIES

The following list of Kentucky manufacturers employing over 100 workers has been compiled from many sources. Those particularly helpful in providing data for Blue Book files were the Kentucky Department of Economic Development, in Frankfort, and various chambers of commerce and local development groups throughout the state.

KENTUCKY

is the
distribution
CENTER
of Industrial
America

KENTUCKY is at the center of industry and consumption in America. Its northern boundary is mere *miles* south of the U. S. center of population. Its eastern border is a day's drive from the Atlantic—its western border is the Mississippi—its southern border looks down into the deep South. *68.4% of America's total population lives within 500 miles of this State.*

No other uncrowded area in the Nation is so close to so many customers—so close to so many of industry's raw materials and components.

These are some of the reasons why Kentucky industry is growing 43% faster than the U. S. average—is up 135.1% from World War II, as compared with 94.5% for the U. S. as a whole.

And Kentucky **WANTS** the kind of growth your plant can help produce. Kentucky *people* want you—businessmen, workers, railroads, utilities and the State Government are surging with activities to make Kentucky more attractive and more *profitable* to you than any other state in the Union.

In recent years, more than half the companies who sent representatives to study the Kentucky facts *have since located new plants here*. Show us your distribution picture, and we will show you what Kentucky offers. *Address:*

Lieutenant Governor Wilson W. Wyatt, or

E. B. Kennedy, *Commissioner*,

Department of Economic Development

600 State Capitol Building, Frankfort, Kentucky

COMMONWEALTH OF

KENTUCKY

WHERE
BIG THINGS
ARE HAPPENING

At the request of Governor Bert Combs, Lt. Governor Wilson W. Wyatt (nationally-known lawyer, and National Housing Expediter after World War II) devotes his full authority to Kentucky's industrial development.

A tremendous new program has been set up to supplement all standard devel-

opment procedures. Every branch of State Government is involved, and the program is backed by hundreds of private organizations. Tax legislation favorable to industry . . . a new 3% sales tax to finance better schools, roads and other improvements . . . state authority for building airstrips, and access roads to plant sites

. . . an Industrial Development Finance Authority, recently upheld by the Court of Appeals, to aid local industrial development projects . . . these and many other great forward strides *have been made* or are now on the threshold of accomplishment. *Big things are happening in Kentucky.* Write for full details!

SPECIALISTS ON *GROWING* PLANTS

In the South, it isn't magic, but the warm, favorable industrial climate that produces phenomenal growth.

Our Industrial Development Department is made up of specialists on *growing* plants. They've thoroughly researched the situation along the Dixie Line, and know intimately which areas are most favorable to various species of industry.

They know where tax blight is least prevalent . . . where growth nourishment—in the form of water, fuel and electrical energy—abounds . . . where to find the best markets for your "crops" . . . and of course they *guarantee* efficient transportation to those markets.

L&N's industrial development specialists are delighted to supply—at a moment's notice—complete plant site information. In fact, they'll do all the spade work for your transplanting job and continue to lend a helping hand until you're well rooted.

Success Lies South . . . along the DIXIE LINE!

LOUISIANA

Jimmie H. Davis, Democrat, is the new governor of Louisiana. Baton Rouge is the capital city.

Named after King Louis XIV of France, Louisiana ranks high in the South in trade, both foreign and domestic. Chief raw materials are cotton, rice and sugar cane, petroleum and sulphur. The state holds third rank in the Nation in production of crude oil, being led only by Texas and California. New Orleans is one of the leading ports of the United States.

Area consists of 48,523 square miles, made up of 45,177 land and 3,346 of water.

In population, Louisiana is making good progress. Present population numbers 3,200,000; and in 1950 the number was 2,684,000; in 1940, 2,364,000; in 1930, 2,102,000; in 1920 1,799,000; and in 1910, 1,656,000.

The state, generally, is a low-lying plain, so low that levees along the Mississippi River are necessary. Marshy in some areas, but extremely fertile throughout, great harvests

of rice and sugar cane contribute mightily to derived income.

In the northern portion, the topography rises considerably, and to a large degree becomes rolling and scenic. Timber is an abundant resource in this section and dairy farms dot the landscape. More sweet potatoes are grown in Louisiana than in any other state.

LEADING INDUSTRIES

The following list of Louisiana manufacturers employing over 100 workers has been compiled from many sources. Those particularly helpful in providing data for Blue Book files were the Louisiana Department of Commerce and Industry, in Baton Rouge; various chambers of commerce and local development groups throughout the state.

MARYLAND

The present governor of Maryland is J. Millard Tawes, Democrat. The capital city is Annapolis.

There are 10,577 square miles embraced in Maryland, 9,887 being land and 690 being water. Population is growing with a current count of 3,050,000.

The state is divided into nearly equal halves by the Fall Line, which enters the state at the northeast corner and runs through Baltimore and Washington.

Southeast of the Fall Line is the Coastal Plain, which in turn is divided by Chesapeake Bay into two parts: the Eastern Shore and Southern Maryland. Both are made up mostly of peninsulas between rivers draining into the bay. The Eastern Shore is well known as a truck-farming area and has a large broiler industry. Fishing and lumbering are also important.

Southern Maryland, the first part of the state to be settled, still raises tobacco after 300 years.

Just beyond Baltimore and Washington extends the Piedmont, a prosperous dairying area. Beyond Frederick the western end of the state is a series of northeast-southwest ridges of the Appalachians with intervening valleys. The widest valley, that around Hagerstown, is a major agricultural area.

Parts of the western tip are underlain by coal, and mining was formerly a major activity.

Most of the population is concentrated in the Baltimore and Washington metropolitan areas. Baltimore is one of the nation's leading ports and is the largest manufacturing center in the South, with major steel, aircraft, and other heavy industries mixed with apparel, canning and other light industries.

LEADING INDUSTRIES

The following list of Maryland manufacturers employing over 100 workers has been compiled from many sources. Those particularly helpful in providing data for Blue Book files were the Maryland Department of Economic Development, in Annapolis, and various chambers of commerce and local development groups throughout the state.

MISSISSIPPI

Ross R. Barnett, Democrat, is the newly-elected governor of Mississippi. Jackson is the capital city.

In area the state covers 47,716 square miles of which 47,420 are land and 296 are water. In population there has been some loss in recent years as numbers of farm workers have migrated to industrial centers to take part in the postwar boom. Population now numbers 2,220,000 against 2,179,000 in 1950; 2,184,000 in 1940; 2,010,000 in 1930; 1,791,000 in 1920 and 1,797,000 in 1910.

Although the highest elevation in Mississippi is only 806 feet, it is by no means all flat. The largest flat lowland area is the Delta area bordering the Mississippi River in the northwest from Vicksburg to Memphis; it extends more than 60 miles inland from the river in the Greenville-Greenwood area. This is one of the great cotton-growing areas of the world.

The southern part of the state is the Piney Woods area, with a large output of lumber and naval stores. The coastal area is almost a solid strip of resorts and estates, punctuated by port areas noted for fishing and shipbuilding.

(C) 100-250 EMPLOYEES (D) 250-1000 EMPLOYEES (E) OVER 1000 EMPLOYEES

MISSISSIPPI

The northeast is rolling farm country and woodland, with the highest hills near the Tennessee River. The crescent-shaped Black Belt extends into the state from Alabama around Columbus.

Chief minerals are petroleum and natural gas, found mainly in the south.

LEADING INDUSTRIES

The following list of Mississippi manufacturers employing over 100 workers has been compiled from many sources. Those particularly helpful in providing data for Blue Book files were the Mississippi Agricultural and Industrial Board, in Jackson, and various chambers of commerce and local development groups throughout the state.

Mr. Manufacturer:

**They're Yours
for the
Asking...**

**on 94
Mississippi
Communities**

If you are considering a new plant site, here's your answer! Complete, accurate surveys on 94 Mississippi communities are ready for you. These studies cover transportation rates, resources, population characteristics, available sites and other valuable information. Then, when your specific needs are known, special studies will be tailor-made for you. Why not write today?

GROWING WITH
THE SOUTH'S FASTEST
GROWING MARKET

An additional 112,000 kilowatt generating unit is now under construction at our 150,000 kilowatt Gulf Coast Generating Plant. This plant is designed for an ultimate capacity of over one-half million kilowatts.

For full information, write:

MISSISSIPPI POWER COMPANY

NEW INDUSTRIES DEPARTMENT • GULFPORT, MISSISSIPPI

The increasing demand for electric power measures the rapid growth taking place in Southeast Mississippi. Mississippi Power Company, with its three modern steam-electric generating plants, plus an interconnected high voltage transmission network integrated with the vast Southern Company system, assures a plentiful and dependable supply of electric power to meet these ever-increasing power needs. Add to this, abundant raw materials, healthy, mild climate, intelligent labor, friendly, cooperative people and excellent transportation facilities, including ocean shipping through deep water ports. It's easy to see why this is the South's fastest growing market for industry with an eye on foreign as well as domestic trade.

North Mississippi

AREA OF MISSISSIPPI'S GREATEST INDUSTRIAL POTENTIAL

Many nationally known firms have picked North Mississippi as a location for their new plants. Some of these are listed below. Check with them about the advantages of this area — or write to us in confidence and we will check for you.

NORTH CAROLINA

Tar Heel State has 49,142 square miles of land and 4,570 square miles of water to constitute a total of 53,712 square miles. The population in 1940 was 3,571,000 and by 1950 had increased to 4,039,000. The estimated population for 1959 was 4,600,000.

Among the Southern states North Carolina ranks first in tobacco, textile, lumber and furniture manufacturers. Principal raw materials are cotton, tobacco, peanuts, tungsten and sand-gravel.

North Carolina falls readily into three nearly equal sections. The eastern part is a broad coastal plain where tobacco, cotton and peanuts flourish. Along the coast are many inlets, and these usually have around them vacation resorts. Cape Hatteras, a rugged sandbar extending far into the Atlantic Ocean, is a well-known land-mark. The central portion is a fertile rolling plateau often spoken of as the Piedmont section. This is the most populous part of the state, and here also is located the greatest plant capacity for heavy industry. The western portion is mountainous — high and rugged — with great scenic beauty and flourishing summer resorts. The mountains in this section are among the highest of the South.

Luther H. Hodges, Democrat, is the present governor of North Carolina. The state capital is Raleigh.

LEADING INDUSTRIES

The following list of North Carolina manufacturers employing over 100 workers has been compiled from many sources. Those particularly helpful in providing data for Blue Book files were the North Carolina Department of Conservation and Development, in Raleigh, and various chambers of commerce and local development groups throughout the state.

"...and that's the expansion wall."

North Carolina industry has a unique symbol in its "temporary wall" legend. Leading industrialists—including Cannon, Cone, Chatham, Hanes, Reynolds, James B. Duke and Spencer Love—learned to build their factories with three walls of brick and one of wood. Expansion was that fast. These industrial pioneers are still pushing back that fourth wall to expand* at accelerated rate. For instance, current investment of \$27½ million will double production for Hanes Hosiery.

And new names from among the "great" in industry are continually being added in North Carolina, where they become a part of the popular business legend that they must build a plant with one temporary wall because expansion will come that soon. Du Pont, Westinghouse,

Pittsburgh Plate Glass, Yale & Towne, Swift, Armour, Gerber, Chemstrand, Douglas Aircraft, and scores more are busy pushing out temporary walls. Smaller industries are doing the same thing! In 1955 Kearfott began making precision components at Asheville; last year they added 450 employees, more than doubling their original number.

If you want ivy to grow on your fourth wall, skip North Carolina. If you are ready for a growth that will keep pushing your fourth wall back, you can communicate in confidence with Governor Luther H. Hodges, Chairman of The Board of Conservation and Development, Raleigh, North Carolina.

*Within-state industry expansion since 1955: \$463,107,000

PIEDMONT POWERLAND

Duke Power company serves about 25% of the area of the two Carolinas, the Piedmont section between the Appalachian Mountains and the Coastal Plains which last year attracted 55% of the new investment in industry in the two states.

Developments in the Duke area during 1959 included 266 new and 157 major additions to plants, representing a well diversified investment of over \$239 million and an estimated payroll in excess of \$96.5 million.

The Piedmont Carolinas supplies the nation with a major portion of its textile, furniture and tobacco products and these industries continue to expand with new and enlarged plants.

Customers number over 703,000 and electric energy production during 1959 totaled 13.8 billion kilowatt hours. Construction plans call for investment of \$74,450,000 in 1960.

For information specific to your needs write Industrial Development Department, Duke Power Company, Charlotte, North Carolina.

Ladle up the Gravy!

Put your plant where over 22 million people spend over \$21 billion a year ... in the Southeast Coastal 6!

Build your plant and profits where the trend is to spend—in the 22-million-plus market of the Southeast Coastal 6.

Check but a few of the statistical indicators and you'll see why this is the nation's growingest, buyingest opportunity land. Here you'll find retail sales exceeding \$21 billion annually; 5 of the top 10 counties (including the first ranking county) in dollar retail sales per household; 31 of the 200 most populous U. S. counties; 31 of the first 200 counties in per capita effective buying income; 25 of the country's 200 biggest cities.

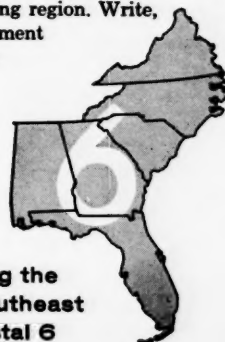

Add such advantages as these to the abundance of large-acreage plant sites, natural resources, manpower, and first class transportation facilities, and you won't want to overlook the Coastal 6. Get the full facts soon on this growing region. Write, wire or phone Coast Line's industrial development specialists for the exact information you want. All inquiries held in strict confidence.

OKLAHOMA

Oklahoma's present governor is J. Howard Edmondson, Democrat. Oklahoma City is the state capital.

Oklahoma is held in high rank in agricultural and mineral output. Chief raw materials are livestock, wheat, coal, zinc and petroleum. In area, the State embraces 69,919 square miles of which 69,283 are

land and 636 are water. Population count in 1959 was 2,320,000.

More than 100,000 Indians live in the state — more than in any other of the 50 states. This is largely by reason of the fact that before admission to the Union the area now embraced in the state served as a territory sheltering the five Civilized Indian Tribes — Cherokee, Choctaw, Chickasaw, Creek and Seminole.

Oklahoma is mostly a rolling prairie, but with the exception that the extreme eastern part contains low parts of the Ozark and Ouachita Mountains. These are covered with dense forests and in part contain rich oil deposits. Most of the rest of the state is made up of large ranches engaged in cattle raising or wheat growing.

LEADING INDUSTRIES

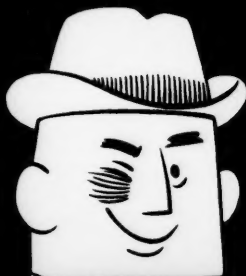

The following list of Oklahoma manufacturers employing over 100 workers has been compiled from many sources. Those particularly helpful in providing data for Blue Book files were the Oklahoma Department of Commerce and Industry, in Oklahoma City, and various chambers of commerce and local development groups throughout the state.

OKLAHOMA

MAX GENET JR. DIRECTOR
DEPARTMENT OF COMMERCE AND INDUSTRY
P.O. BOX 3327 - CAPITOL STATION OKLA CITY OKLA

CONDITIONS

ARE

FAVORABLE

IN

OKLAHOMA!

*We've got it
made when it
comes to water.*

*Tax trouble?
Not in Oklahoma!*

*We're in the
muddle of things.*

Water... good, industrial water. More than 2 trillion gallons of it stored in our large lakes, with more, even larger lakes under construction. Oklahoma has anticipated industrial growth and can provide high quality water for all industrial demands.

Taxes... we have them, like everyone else. But there has not been a tax increase in Oklahoma in the past 18 years, in fact they have been lowered. Every tax change during that period has been for the benefit of industry. Our constitution prohibits deficit spending, provides a stable, broadly based tax system.

Transportation... the focal point of the new federal interstate highway system. The main east-west and north-south routes of this super-highway network come together in Oklahoma. Now under construction, a barge canal connecting Oklahoma with the Mississippi River. Fast freight to the industrial centers of the nation. Air travel a cinch from some of the country's best equipped airports.

SOUTH CAROLINA

E. L. Hollings, Democrat, is South Carolina's present governor. Columbia is the capital city.

Area of the Palmetto State consists of 31,055 square miles — 30,594 land, 461 water. In population the state shows moderate growth. Inhabitants numbered 2,460,000 in 1959; 2,117,000 in 1950; 1,900,000 in 1940; 1,739,000 in 1930; 1,684,000 in 1920; and 1,515,000 in 1910.

South Carolina ranks high both in the South and Nation in textile manufacturing. Once largely agricultural, in industrial structure, the state has paced the South in recent years in manufacturing development; most of this gain has been in textiles. Chief raw materials are cotton and tobacco, sand, gravel and stone.

Topographically, the eastern two-thirds of the state is a coastal plain, with large portions covered with forest. From this plain the land level rises gradually to the Piedmont region in the northwest.

LEADING INDUSTRIES

The following list of South Carolina manufacturers employing over

(C) 100-250 EMPLOYEES (D) 250-1000 EMPLOYEES (E) OVER 1000 EMPLOYEES

SOUTH CAROLINA

100 workers has been compiled from many sources. Those particularly helpful in providing data for Blue Book files were the South Carolina State Development Board, in Columbia, and chambers of commerce and local development groups throughout the state.

TENNESSEE

The governor of Tennessee is Buford Ellington, and the capital of the state is Nashville.

Tennessee's area consists of 42,246 square miles of which 41,961 are land and 285 are water. In population growth the state is doing very well. Number of inhabitants was 3,570,000 in 1959; 3,292,000 in 1950; 2,916,000 in 1940; 2,617,000 in 1930; 2,338,000 in 1920; and 2,185,000 in 1910. Chief raw materials are cotton and corn, coal, copper and stone.

Tennessee divides naturally into three regions. In eastern Tennessee are two mountain ranges, the Great Smokies, and the Cumberlands with the Valley of East Tennessee River. Home of the Tennessee Valley Authority and the first atomic energy center at Oak Ridge. Mining and lumbering are the principal industries of this region.

Central Tennessee is a high plateau surrounded by other highlands, rich in good farm lands and in raw materials of many kinds. Western Tennessee lies in the Mississippi River Valley confines and is low and flat. It is a great cotton growing region.

LEADING INDUSTRIES

The following list of Tennessee Manufacturers employing over 100 workers has been compiled from many sources. Those particularly helpful in providing data for Blue Book files were the Tennessee Department of Conservation and Commerce in Nashville and various chambers of commerce and local development groups throughout the state.

A Shipping Problem SOLVED...

...at MEMPHIS, Crossroads of materials and markets

If you need a location to economically serve the South, Southeast, Southwest and Mid-West, then you should seriously consider Memphis, Tennessee, in your expansion or re-location plans. Here's why:

MEMPHIS is an inland port and transportation center.

MEMPHIS is the geographic center of a 17-state market.

MEMPHIS offers second morning or better delivery to these 17 states by rail or truck.

MEMPHIS Port is served by five barge lines operating scheduled service to all navigable points on the Mississippi, Missouri, Illinois, Tennessee, Ohio and secondary rivers; and to shipside at the Gulf of Mexico.

MEMPHIS Port facilities are served by 91 motor freight lines reaching all 48 states, Canada and Mexico.

MEMPHIS Port rail facilities connect directly with eight trunk line railroads having 17 radiating lines to provide direct one-line service to 25 states.

MEMPHIS has more than 11,500 acres available in planned industrial districts.

MEMPHIS utility rates are among the lowest in the nation.

MEMPHIS is an excellent labor market, has an advantageous tax structure for industry, has sound, stable government and is a fine place to live.

Join the more than 50 firms which have located in the 7,800-acre Memphis Harbor and Industrial Area where 7,200 acres are still available including property with and without water frontage.

Tennessee Winning New Industry

332 New Plants and Expansions in 1959

\$243,000,000 INVESTED

Tennessee's industrial advantages are attracting hundreds of manufacturers who are considering branch plants or warehouses in the South.

Records show that 903 new plants have been established in Tennessee during the past seven years and that 1,284 existing plants have expanded.

In 1959 alone, the state obtained 146 new plants and had 186 expansions with a total investment of \$243,000,000.

Factors influencing these decisions include central location, a governmental climate highly favorable to industry with state-approved municipal financing, building costs low as \$5.00 a sq. ft. for air-conditioned plants, low-cost electric power, ample labor supplies, and progressive cities and towns with a

WIDE CHOICE OF PLANT SITES

For details on these and Tennessee's other industrial advantages, write for free illustrated booklet or outline your needs and we'll gladly make specific recommendations without cost or obligation. All inquiries held strictly confidential.

TEXAS

The governor of Texas is Price Daniel, Democrat. Austin is the capital city.

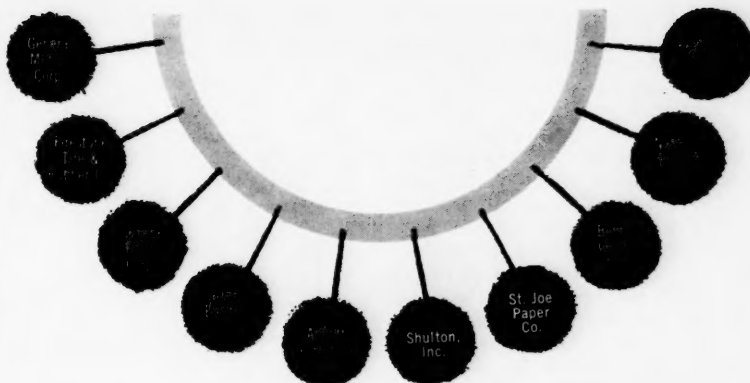

Texas is the second largest state, consisting of 267,339 square miles — 263,644 land and 3,695 water. In population the state displays excellent growth. Number of inhabitants in 1959 was 9,600,000; in 1950, 7,678,000; in 1940, 6,415,000; in 1930, 5,825,000; in 1920, 4,663,000; and in 1910, 3,897,000.

Texas leads the South in practically all categories of domestic trade, and ties with Maryland and Louisiana for leadership in foreign trade. Chief raw materials are livestock and cotton, sulphur and petroleum.

Most of Texas is a succession of plains and plateaus gradually ascending from the Gulf of Mexico to an elevation of about 4,000 feet along the New Mexico line. In westernmost Texas not far from El Paso, outlying ranges of the Rocky Mountain system reach nearly 9,000 feet.

Along the Gulf lies the low coastal prairie, succeeded inland by the pine woods and post oak belts, which are confined to the eastern part of the state and contain most of the state's timber.

Next inland is the famous Blacklands, a fertile north-south belt from San Antonio to Dallas and

The South's Foremost Organization For Industrial Development Is Fully Equipped To Serve You

The South's largest, and one of the nation's leading organizations of its kind, the Union Realty Company organization specializes in the design and construction of manufacturing, processing, distribution, storage and commercial structures on either a Lock-and-Key Lease or Sales Basis. We have our own Architectural and Engineering Department, extensive grading and excavation equipment, and our own construction company. We own more than 30,000 front feet of the finest industrial sites in planned and restricted industrial districts within 3 miles of downtown Memphis. We also own properties adjoining the Memphis city limits and elsewhere to accommodate industries requiring sites of unlimited size.

All sites are served by main line trackage, access to highways, and all necessary utilities. We can furnish immediate office space and public warehousing space for use during the period of building. We generally have industrial buildings under construction or existing buildings available at all times, ready for almost immediate occupancy. With our "complete package proposal", you eliminate the worry, cost and delay entailed in preparation of plans, taking of bids, and coordination of architect, grading contractor, building contractor, railroad company, city authorities, and the many other parties involved in these projects. We have an outstanding record of successful achievement, and we are fully equipped to serve you in the Memphis area or elsewhere.

Layout, plans, and quotations provided promptly on completely confidential basis.

For further information write, wire or phone

TEXAS

eastward to Paris. Formerly noted for cotton, it is now a mixed farming area with much dairying.

Beyond the Balcones Escarpment lies the Central Hill Country and farther north and west the Rolling Plains, which extend all the way to the Caprock in the Panhandle. Much of this area is in vast cattle and sheep ranches. Above the Caprock lie the vast level expanses of the High Plains, now heavily irrigated from wells and the main center of cotton production.

In the far south is the irrigated Lower Rio Grande Valley, noted for its citrus and winter vegetables.

More than two-thirds of the counties are or have been oil producers; main production now centers in the Permian Basin surrounding the southeast corner of New Mexico. Natural gas is widely distributed and oil and gas pipelines criss-cross the state.

Heavy industry is mainly concentrated in Houston and other Gulf Coast cities, where there are large refineries and chemical plants. Aircraft production, market-oriented industries, and regional distribution are dominant in the Dallas-Fort Worth area.

LEADING INDUSTRIES

The following list of Texas Manufacturers employing over 100 workers has been compiled from many sources. Those particularly helpful in providing data for Blue Book files were the Texas Industrial Commission and the Bureau of Business Research of the University of Texas, in Austin, and various chambers of commerce and local development groups throughout the state.

We Invite You to Use the Facilities of our Area Development Department

Before you decide on any location in the Southwest, let us give you the facts about the North Central and West Texas area we serve. This area is the geographical center and heart of a rapidly expanding, \$27 billion, five-state market.

Industries and businesses which have selected the area served by Texas Electric Service Company enjoy the benefits that come with rapidly increasing population, diversified economy, a wealth of petroleum and other natural resources, cooperative and progressive communities, a favorable year-round climate, and plenty of dependable, low-cost electric power.

Our Area Development Department, with years of experience, knows how to work with business and industry, and will be glad to provide you efficient research and accurate information from on-the-spot knowledge of sites, markets and resources.

A letter, wire or telephone call to our Area Development Department will bring you detailed information. Your inquiry will be held confidential, of course.

*Eyeing a
new plant site?*

The Texas Power & Light Company invites expanding industry, large or small, to make use of the services of its staff of specialists—skilled and experienced in serving officers and executives of industrial corporations. Without obligation, your particular location problems will be carefully and thoroughly analyzed by those having broad knowledge of industry and facts pertaining to manpower, materials, resources, finance and other important factors in Texas.

Write, wire or call J. D. Eppright, Director, Industrial Development Division, Texas Power & Light Company, Dallas, Texas. Inquiries held in strict confidence.

Booklet detailing plant location services
sent on request.

VIRGINIA

Virginia's governor is J. Lindsay Almond, Jr., Democrat. Richmond is the state capital.

The eastern part of Virginia is the Tidewater area, a coastal plain cut into long peninsulas by rivers flowing to Chesapeake Bay. It produces timber, tobacco and truck crops and is dominated by the port cities of Norfolk, Portsmouth, Newport News and Hampton, where shipbuilding, naval bases, and coal export are the leading activities.

The Tidewater area ends at the Fall Line, where Richmond, Petersburg and the Virginia suburbs of Washington, D. C., are located.

Beyond the Fall Line cities extends the Piedmont, a rolling plateau rising gradually to the Blue Ridge. Much of it is dairy country, and tobacco and corn are also grown.

The Blue Ridge Mountains contain the famous Shenandoah National Park and are followed for most of their length by Skyline Drive.

Beyond lies the narrow but pro-

ductive Shenandoah Valley and its southward continuation. The population of Virginia has increased from 3,271,000 in 1950 to 4,020,000 in 1959.

LEADING INDUSTRIES

The following list of Virginia manufacturers employing over 100 workers has been compiled from many sources. Those particularly helpful in providing data for Blue Book files were the Virginia State Chamber of Commerce, and the Virginia Department of Conservation of Economic Development, in Richmond, and various chambers of commerce and local development groups throughout the state.

WEST VIRGINIA

The current governor of West Virginia is Cecil H. Underwood, Republican. Charleston is the state capital.

In area the Mountaineer State takes in 24,181 square miles, of which 24,000 are land and 181 are water. With respect to population the state is just about holding its own. Inhabitants in 1959 numbered 2,020,000; in 1950, 2,006,000; in 1940, 1,902,000; in 1930, 1,729,000; in 1920, 1,464,000; and in 1910, 1,221,000.

The Allegheny Mountains separate West Virginia from Virginia and supply both states with valuable deposits of coal. West Virginia is sometimes called the Panhandle State because of two panhandle areas within its boundaries. One such area is in the east, the other in the north. The eastern panhandle is a fertile plain drained by the Potomac River. The northern panhandle along with the whole northwestern part of the state is also a lowland, drained by the Ohio River. The best farm lands of the state are in this area.

The central part of West Virginia is a portion of the Appalachian Plateau, a region of high hills and deep valleys with important deposits of coal and petroleum.

LEADING INDUSTRIES

The following list of West Virginia manufacturers employing over 100 workers has been compiled from many sources. Those particularly helpful in providing data for Blue Book files were the West Virginia Department of Labor, and the West Virginia Industrial & Publicity Commission, in Charleston, and various chambers of commerce and local development groups throughout the state.

WEST VIRGINIA

LOCATION — West Virginia is in the center of expanding opportunities — within 500 miles of 50% of the nation's population. Quick access to raw materials and to markets — these are among West Virginia's advantages.

LABOR — Workmen trained to your requirements under a program supervised by the State's Vocational Education Department are offered you as another reason to come to West Virginia. Workmen here are versatile to begin with and adapt easily.

POWER — In recent years electric power has expanded enormously to meet the needs of growing industries — power based on West Virginia coal. West Virginia is the center of an unusual array of advantages which will make your future prosperous.

For information write Don Crislip, Executive Director, West Virginia Industrial and Publicity Commission, State Capitol, Room 5P, Charleston 5, West Virginia.

More Power for the South!

Growth of The Southern Company electric power system continues to match that of our four-state service area. In 1959, \$178,665,000 was spent on new power plants and expansion of facilities.

An additional \$538,000,000 will be required for anticipated expansion during the next three years.

Our investors are sharing in the benefits of this growth. This year, 1960, is the sixth consecutive one in which dividends have been increased.

NEED A NEW PLANT SITE?

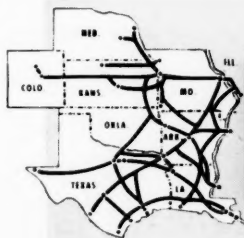

**TAKE A GOOD LOOK AT THE GROWING
WEST-SOUTHWEST—abundant in water,
fuel, raw materials, labor and served by the
MISSOURI PACIFIC RAILROAD . . .**

Missouri Pacific will help you find that site you need. Our Industrial Development Department will prepare a complete survey for you: special charts, data on population, markets, labor, taxes, climate, power, resources, raw materials, transportation . . . with all inquiries kept in strict confidence.

Just call, write or wire:

E. SMITH REED
